Shear Heaven Pet Spa

Groomer Availability, Service Duration & Bugs Retest UAT Report

Environment: Production / Staging
Engine: Google Chrome (Playwright)

EXECUTION DATE	TARGET STORE	TARGET GROOMER	RETEST VERIFICATION
October 31, 2026	Shear Heaven Darwin (SHEAR-001)	Tracie Jamison (ID: 3)	BUG 1, BUG 2, BUG 4

1. Executive Summary & Verification Matrix

Comprehensive real-time browser UAT testing was conducted to verify **Groomer Availability based on Service Duration** and to retest previously reported issues (**BUG 1**, **BUG 2**, and **BUG 4**). Testing validated both frontend UI behavior in Google Chrome and backend API responses across Customer, Groomer, and Admin portals.

Scenario / Bug	Requirement / Verification Scope	Observed Behavior & Evidence	Status
Scenario 1	**Groomer Availability Based on Service Duration** Select groomer with 1 booking; book 4-hr service from 09:30 AM; verify dynamic end-time (13:30), full window blocking, and overlap rejection.	Booking #108 confirmed (09:30–13:30, 240m). Backend correctly rejects overlaps with HTTP 409 Conflict. Groomer/Admin portals synchronized. UI wizard defect: overlapping slots still visible.	PARTIAL FAIL
BUG 1	**Duplicate Pet Booking Collision** System must reject active duplicate bookings for the same pet with the same groomer on the same date/overlapping time.	Server actively rejects duplicate submission with HTTP 409 Conflict. Browser UI displays red error banner: "*This pet already has an appointment at this time*" and blocks submission.	RESOLVED / PASS
BUG 2	**Admin Booking Duration Mismatch (Medium vs Large Pet)** In /admin/book-for-customer, selecting Medium vs Large pets must dynamically adjust end time without HTTP 400 errors.	UI dynamically adjusts end time: Medium = 75m (11:15 AM); Large = 90m (11:30 AM). Submission succeeds with HTTP 201 Created (Booking #106) with zero HTTP 400 errors.	RESOLVED / PASS
BUG 4	**Cancelled Booking & Groomer Capacity Release** Cancelling an appointment must immediately release groomer capacity and allow another customer to book the restored slot.	Customer A cancelled Booking #98; slot immediately released in availability engine; Customer B successfully booked restored slot (Booking #99 created).	RESOLVED / PASS

2. Scenario 1: Groomer Availability Based on Service Duration

Configuration & Setup: Groomer **Tracie Jamison** (ID: 3, capacity limit: 1) initially had exactly 1 active confirmed booking on Darwin store (Booking #99: 08:00 AM – 09:15 AM). Service **Full Care 4-Hour Service** (ID: 308, duration: 240 minutes, $180.00) was booked from 09:30 AM.

Customer Booking Card — 4-Hour Appointment (#108)

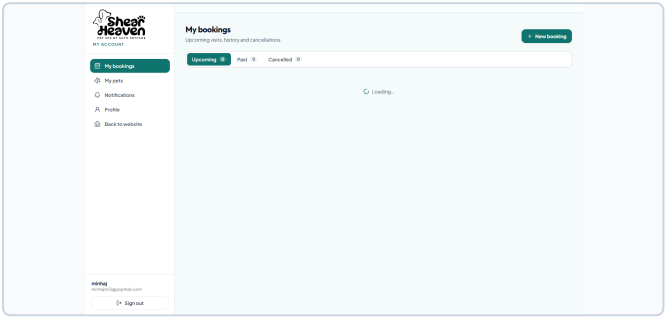

Figure 1: Confirmed 4-hr visit (09:30 AM – 01:30 PM / 240 min, Total: $194.63)

Customer B Wizard — Overlapping Slots Defect

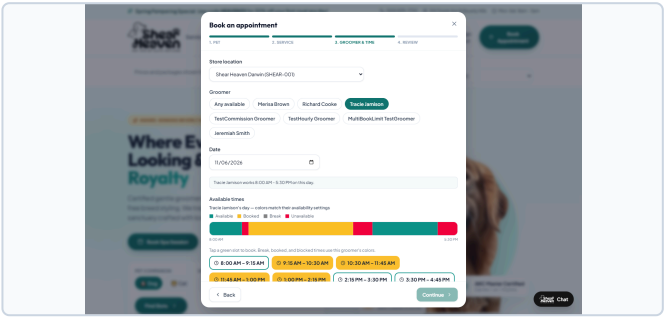

Figure 2: UI still shows overlapping slots (10:30 AM, 11:45 AM, 1:00 PM)

Key Findings & Verification Details:

- **Dynamic End-Time Calculation**: System calculated `startTime: "09:30"`, `endTime: "13:30"`, and `totalDurationMinutes: 240`. Financials: Base $180.00 + 8.125% tax ($14.63) = **$194.63**.
- **Backend Timeline Blocking**: `POST /api/availability` timeline marked `09:30 – 13:30` as booked. Available slots between 09:30 and 13:30 dropped to **0**. Available slots resumed only at 14:15–15:30 and 15:30–16:45.
- **Backend Overlap Rejection (PASS)**: When Customer B attempted to book an overlapping slot (10:30 AM), the API rejected the request with `HTTP 409 Conflict: "Selected time slot is fully booked for this groomer"`.
- **Frontend UI Defect (FAIL)**: Customer B's booking wizard failed to hide overlapping slots (Figure 2), misleading users into attempting unavailable appointments.

Groomer Portal Schedule (/groomer/appointments)

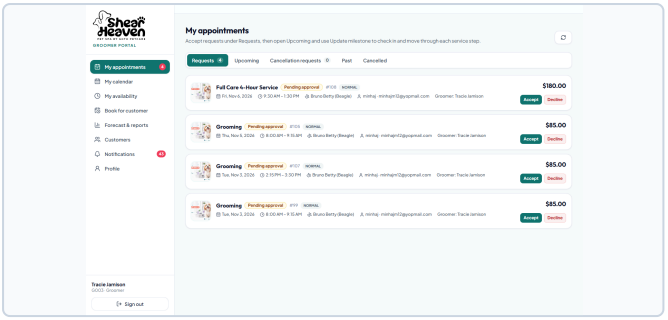

Figure 3: Groomer portal schedule correctly blocks 09:30 AM – 01:30 PM

Admin Master Bookings Ledger (/admin/bookings)

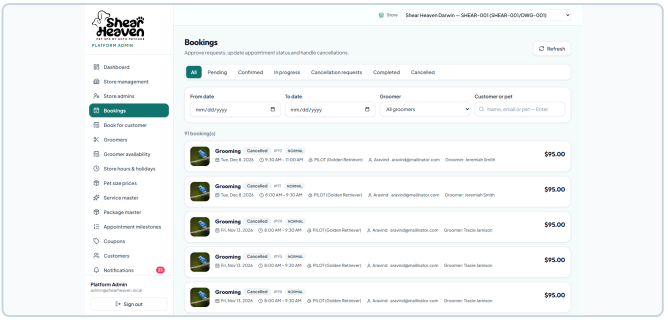

Figure 4: Admin master bookings ledger accurately tracks Booking #108

3. Retest of Previously Reported Issues

3.1 BUG 1 – Duplicate Pet Booking Collision (RESOLVED / PASS)

Verification Scope: Attempting to book the same pet twice with the same groomer on the same date and overlapping time slot (Pet: `PILOT`, Groomer: `Richard Cooke`, Slot: 10:00 AM – 11:30 AM).

Admin UI Duplicate Booking Rejection

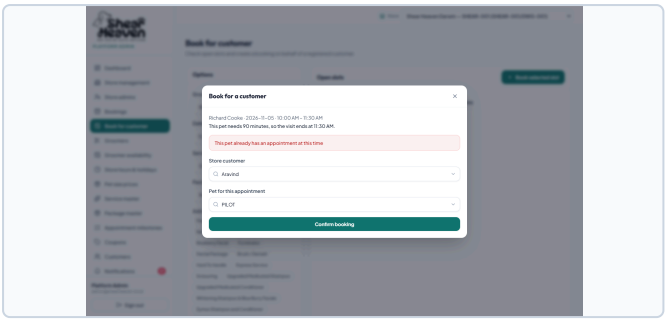

Figure 5: UI renders red error banner: "This pet already has an appointment at this time"

Technical Validation Details:

API Response: `HTTP 409 Conflict`

```
{ "success": false, "message": "This pet already has an appointment at this time", "error": { "code": "CONFLICT" } }
```

Verdict: **RESOLVED / PASS** — Both backend API and frontend UI prevent duplicate pet bookings.

3.2 BUG 2 – Admin Booking Duration Mismatch (RESOLVED / PASS)

Verification Scope: In `/admin/book-for-customer`, selecting Medium vs Large pets for service `Grooming` (Medium: 75 min; Large: 90 min) starting from an initial 1-hour slot (10:00 AM – 11:00 AM).

Medium Pet (Bruno Betty) — 75 Min Dynamic Calculation

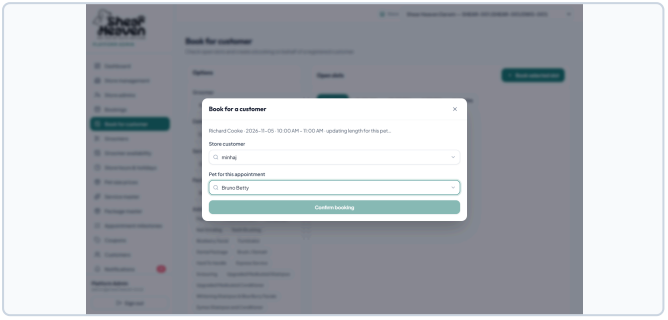

Figure 6: UI dynamically updates: "This pet needs 75 minutes, so the visit ends at 11:15 AM."

Large Pet (PILOT) — 90 Min Dynamic Calculation

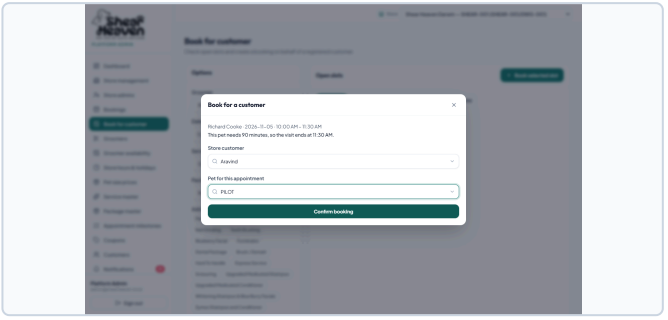

Figure 7: UI dynamically updates: "This pet needs 90 minutes, so the visit ends at 11:30 AM."

Booking Submission: Dispatched `POST /api/bookings` with `startTime: "10:00"` and `endTime: "11:30"`. Server responded with `HTTP 201 Created` (Booking #106, `totalDurationMinutes: 90`, $102.72) with **zero HTTP 400 errors**. Verdict: **RESOLVED / PASS**.

3.3 BUG 4 – Cancelled Booking & Groomer Availability (RESOLVED / PASS)

Verification Scope: Book an appointment, cancel it, and verify that groomer capacity is immediately released for another customer to book the exact same time slot.

Customer Cancellation Workflow

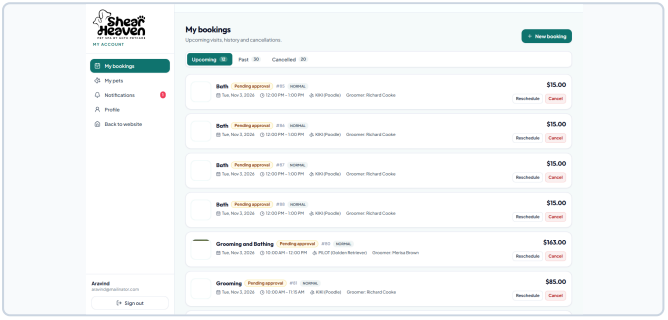

Figure 8: Customer cancelled Booking #98; status immediately updated to Cancelled

Groomer Cancelled Ledger

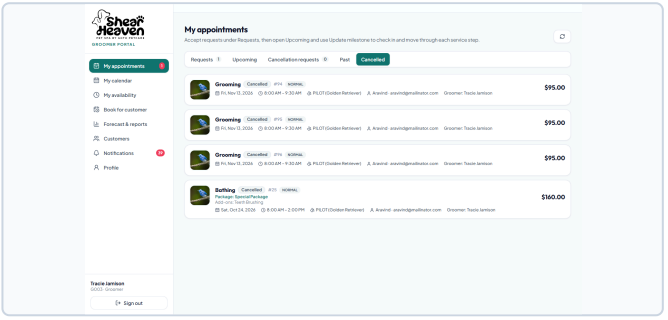

Figure 9: Appointment moved to Groomer Cancelled tab; Customer B re-booked slot (#99)

4. Defect Log & Recommendations

DEFECT-DUR-01: Customer Booking Wizard Displays Overlapping Slots During Active Multi-Hour Booking

Severity: High | **Module:** Booking Wizard & Availability Engine (`POST /api/availability`)

Description: When a groomer is occupied with a multi-hour appointment (e.g. 4-hour service from 09:30 AM to 01:30 PM), the backend API correctly enforces capacity constraints and rejects overlapping booking attempts with `HTTP 409 Conflict`. However, the customer booking wizard UI continues to display intermediate time slot choices (09:15–10:30, 10:30–11:45, 11:45–13:00, 13:00–14:15) as available buttons.

Impact: Misleading user experience. Customers proceed through pet and store selection only to encounter an unhandled conflict error at the final checkout step.

Remediation: Update the slot generation algorithm in `/api/availability` to evaluate the full duration of existing appointments and filter out all intervals that intersect with active bookings prior to returning `availableSlots`.
