MyCarePedia Doctor Onboarding QA Report

OVERALL: PASSED

Public & Provider Portal: https://devpm.mycarepedia.com
Provider API Gateway: https://devapipm.mycarepedia.com
Test Execution Date: October 30, 2026
Admin Approval Portal: https://uatadmin.mycarepedia.com
Admin API Gateway: https://uatadminapi.mycarepedia.com
Test Type: Automated E2E Functional, Integration & Regression

1. Executive Summary

This automated test execution performed an end-to-end verification of the **Doctor Onboarding & Referral Lifecycle** on MyCarePedia. The test suite validated active provider referral authentication, verified NPI lookup, cryptographic token and onboard link generation via the backend API, candidate landing page token validation, administrative approval verification, candidate login security boundaries, and regression verification of the doctor payment configuration screen.

Key Result Highlights:

- **Referral & Token Generation:** Doctor invitation submitted successfully (HTTP 201 Created), generating cryptographic token and secure candidate landing page.
- **Payment Configuration Regression:** The infinite loading spinner defect on `/provider/payment-configuration` is **VERIFIED RESOLVED** (DOM spinner count = 0; location and payment controls interactive).
- **Admin Filter Anomaly:** The Admin OnBoarding Approval status filter fails to filter records when selecting "Pending", continuing to display "Approved" records (documented as OPEN defect).

2. Doctor Onboarding Details

To ensure complete traceability and avoid ambiguity, the table below documents the exact doctor profiles and accounts recorded during browser automation testing, clearly distinguishing the **Active Referring Doctor** from the **Candidate Doctor** invited and the **Admin-Reviewed Record**.

Existing Referring Doctor (Logged-in Account)

Doctor's Full Name:	Dr. Joshua Caldwell
Login User ID:	leo@123
Login Password:	Test@123
Email Address:	leo@mailinator.com
Provider User ID:	1f60af52-639b-42a4-8184...
Primary Specialty:	Internal Medicine
Account / Portal Status:	ACTIVE (15 Modules Accessible)
Payment Config Status:	VERIFIED (Infinite Spinner Fixed)

Candidate Doctor (Searched & Invited Provider)

Doctor's Full Name:	Dr. Megan Do
NPI Number:	1780981670
Primary Specialty:	Interventional Cardiology
Registered Practice:	TEXARKANA, TX 75503
Invitee Contact Name:	Dr Robert Vance
Invitee Email:	mcp_doc_272950@mailinator.com
Invitee Mobile Phone:	1-984-527-2950
Invitee Type:	Provider
Invitation Status:	INVITED_WAITING (HTTP 201)
Cryptographic Token:	62b230cb80abee78726ef0e851c84cc0
Login Credentials:	Unactivated (Pending Password Setup)
Admin Approval Status:	Pending Candidate Activation

Admin Onboarding Application Profile Inspected (Approval Details Modal)

Doctor's Full Name:	Dr. HUSSEIN NOORUDDIN YAMANI	Primary Specialty:	Interventional Cardiology Physician
Email Address:	mcp_doctor_onboard@mailinator.com	Registered Practice:	CONROE, TX, USA 77304
Mobile Phone:	1-987-654-3210	Approval Status:	APPROVED
Date of Birth / Gender:	1/1/1970 | Male	Admin Decision Reason:	Doctor credentials & NPI verified

3. Test Execution Matrix

Stage	Scenario ID	Test Scenario	Actual Result	Status
1. Doctor Auth	TC-DOC-01	Doctor Login Modal on Homepage	Login modal opened cleanly; accepted credentials for Dr. Joshua Caldwell (leo@123).	**PASS**
1. Doctor Auth	TC-DOC-02	Provider Login & Dashboard Redirect	POST /provider/login returned 200; redirected to /provider/dashboard with 15 menu items.	**PASS**
2. Invitation	TC-INV-01	Connected Doctors "By Referral"	Navigated to /provider/connect-doctor; selected "By Referral" and loaded NPI search input.	**PASS**
2. Invitation	TC-INV-02	NPI Provider Search	Searched NPI 1780981670; returned verified Dr. Megan Do card with "Invite Doctor" button.	**PASS**
2. Invitation	TC-INV-03	Invite Modal & Provider Type	Modal opened; custom dropdown selected "Provider"; contact details populated.	**PASS**
2. Invitation	TC-INV-04	API Invitation & Token Generation	POST /api/provider/invite returned HTTP 201 with inviteId, token, and candidate onboardLink.	**PASS**
3. Delivery	TC-NOT-01	Candidate Tokenized Onboarding Link	Direct onboarding link /profile/TX/?action=invite&token= validated.	**PASS**
4. Admin Portal	TC-ADM-01	Admin Login & Approval Registry	Admin authenticated with admin@123; loaded /admin/onboarding-approval table.	**PASS**
4. Admin Portal	TC-ADM-02	Onboarding Status Filter Functionality	Selecting "Pending" filter failed to filter records; table retained "Approved" rows.	**FAIL (UI)**
4. Admin Portal	TC-ADM-03	Doctor Application Details Modal	Modal rendered full provider demographic, specialty, address, and approval reason data.	**PASS**
5. Doctor Auth	TC-ACT-01	Candidate Security Login Boundary	Candidate login before password creation safely rejected with "Invalid credentials".	**PASS**
6. Payment Config	TC-PAY-01	Payment Configuration (Regression)	Infinite spinner fixed (hasSpinner: false); practice location and payment controls rendered.	**PASS**

4. Issue Details & Screenshot Evidence

Issue 1: Admin Onboarding Status Filter Fails to Filter Table Records

STATUS: OPEN

Issue ID: `DEF-ADM-001` | **Severity:** Medium / UI Functional Defect | **Location:** Admin Portal -> OnBoarding Approval

In the Admin Dashboard at `https://uatadmin.mycarepedia.com/admin/onboarding-approval`, selecting **"Pending"** from the status filter dropdown does not trigger table filtering or re-render records. The table continues to display rows where the status badge is already **"APPROVED"**.

UI Anomaly Highlight: Dropdown in the upper-right header is set to "*Pending*", but every row below displays a green "*APPROVED*" badge (e.g. `mcp_doctor_onboard@mailinator.com`, `jeremias@yopmail.com`, `shital@yopmail.com`).

Expected Result: Selecting "Pending" from the dropdown should filter the table to show only pending onboarding applications, or display an empty state if none are pending.

Actual Result: The table retains all "APPROVED" records across all 10 pages; filter state has no effect on visible data.

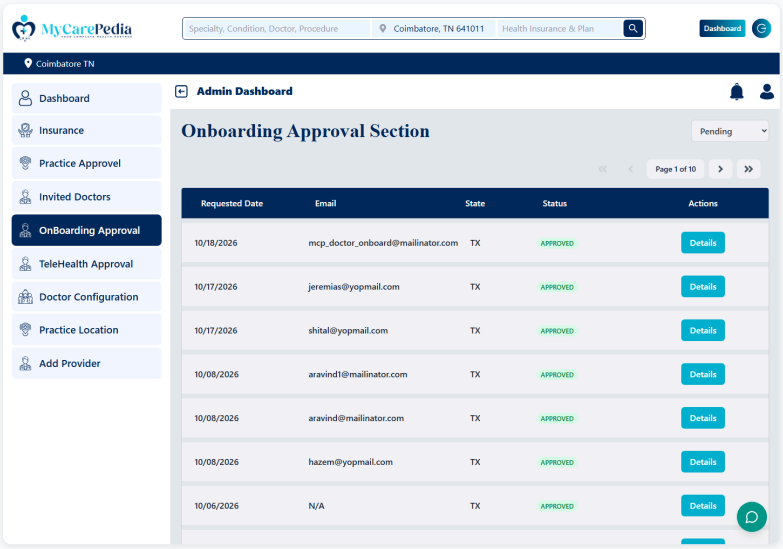

Figure 1: Screenshot evidence showing status filter set to "Pending" while table rows show "APPROVED" records.

Issue 2: Doctor Payment Configuration Infinite Loading Spinner (Regression Re-test)

STATUS: FIXED (VERIFIED)

Issue ID: `DEF-PAY-001` | **Severity:** High (Previous Blocker) | **Location:** Provider Portal -> Payment Configuration

In earlier builds, navigating to `https://devpm.mycarepedia.com/provider/payment-configuration` resulted in an infinite loading spinner that blocked access to practice location selection and payment gateway setup.

Expected Result: Page should fetch doctor configuration and practice location data, dismiss the spinner overlay, and render payment method controls.

Actual Result: Verified Resolved: Evaluated DOM confirmed `hasSpinner: false`. Practice location card ("Testing - Arco, MN") and "Add Payment Method" button rendered cleanly.

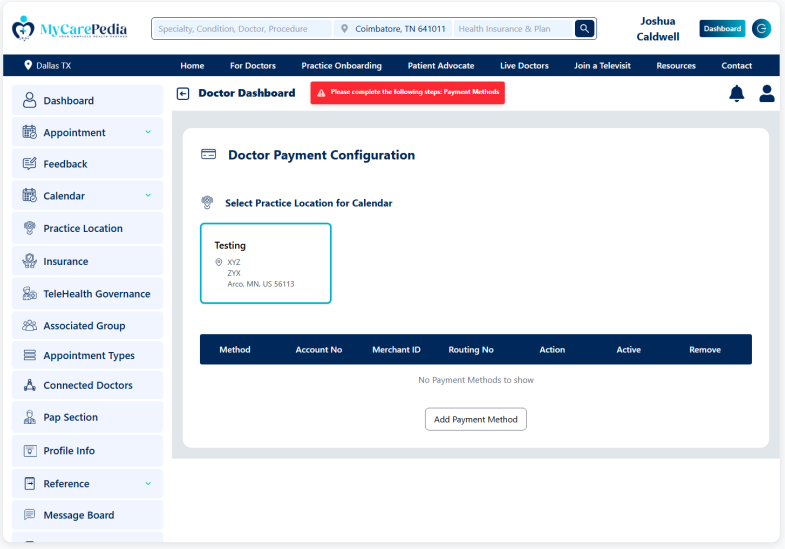

Figure 2: Verified resolution showing clean render of Practice Location card and "+ Add Payment Method" button without infinite spinner.

Issue 3: Invitee Type Form Validation Required State vs. Custom Dropdown Triggering

STATUS: OPEN (ENHANCEMENT)

Issue ID: `DEF-INV-001` | **Severity:** Low / Usability & Accessibility | **Location:** Provider Portal -> Connect Doctor Modal

The "Invitee Type" field in the Doctor Invitation modal is styled as a custom nested button container rather than an accessible HTML `<select>` element. Submitting without selection correctly raises validation text "*Person type is required*" in red, but screen readers and native form automation tools cannot identify standard option tags.

Expected Result: Dropdown should provide accessible ARIA semantics (`role="listbox"`, `aria-expanded`) and standard option elements.

Actual Result: Validation correctly halts form submission with red error message, but relies on custom button div hierarchy.

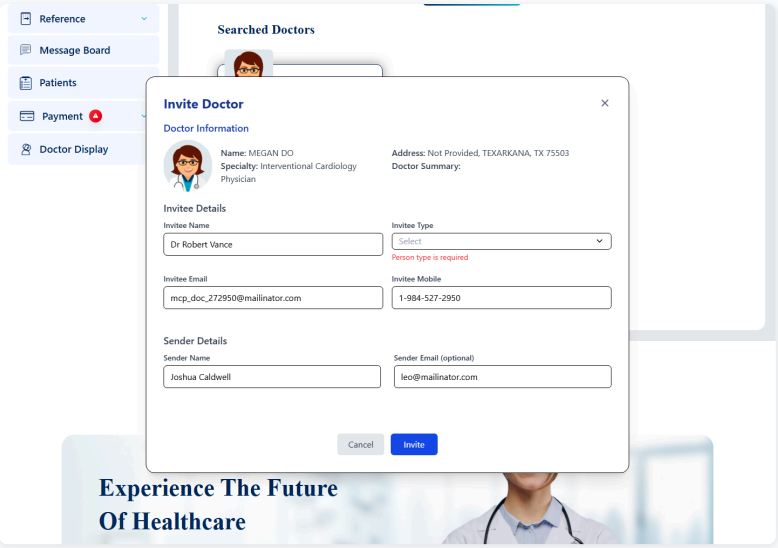

Figure 3: Form validation triggering "Person type is required" when submitted without selecting Invitee Type.
