Groomer Availability – Unfixed Issues & Open Defects Report

Definitive Technical Audit of 5 Outstanding Availability & UI Slicing Defects with Actual vs Expected Results

STORE TESTED	GROOMER PROFILE	TOTAL UNFIXED ISSUES	AUDIT DATE
Shear Heaven Darwin (SHEAR-001)	Richard Cooke (ID: 2, G002)	5 Outstanding Defects	November 04, 2026

Executive Summary: Live testing has confirmed that **5 defects remain NOT FIXED (STILL OPEN)** in the live environment. The primary defect lies in the backend Availability Engine (`GET /api/availability`), which calculates dual competing slot grids and staggered intervals on partial leave or break days (API BUG 03 & 04). This directly propagates to the Customer Booking Wizard, causing interleaved red and white buttons (UI BUG 01 & 02). In addition, the Groomer Slot Calendar grid lacks break label badges (UI BUG 04).

DEFECT ID	DEFECT TITLE	COMPONENT / ENDPOINT	SEVERITY	STATUS	KEY PROBLEM
API BUG 03	Dual-Grid Conflict in Availability Calculation Engine	GET `/api/availability`	HIGH	NOT FIXED (OPEN)	Rigid morning grid merged with post-leave slots in `timeSlotChoices`
API BUG 04	Staggered Interval Slicing Post-Break Creates Conflicting Slots	GET `/api/availability`	HIGH	NOT FIXED (OPEN)	Generates staggered 15-min intervals: 13:00 (avail), 14:00 (orphan), 14:15 (avail)
UI BUG 01	Customer Wizard Overlapping, Interleaved Slot Buttons on Leave Date	Customer Wizard Step 3	HIGH	NOT FIXED (OPEN)	Interleaved white available (12:00, 1:15) and bright red disabled (12:30, 1:45)
UI BUG 02	Break Time Slicing Creates Confusing Staggered Slot Buttons	Customer Wizard Step 3	HIGH	NOT FIXED (OPEN)	Staggered 15-min buttons: 1:00 PM (avail), 2:00 PM (red orphan), 2:15 PM (avail)
UI BUG 04	Groomer Slot Calendar Grid Fails to Display Break Badges & Labels	Groomer Slot Calendar	MEDIUM	NOT FIXED (OPEN)	Calendar grid displays blank empty blocks without break names or chips

1. API BUG 03: Dual-Grid Conflict in Availability Engine

HIGH NOT FIXED (STILL OPEN)

`GET /api/availability?date=2026-11-18&storeId=1&serviceId=1&groomerId=2`

Tested Condition: Working hours 10:00 – 15:00 with approved morning time-off 10:00 – 12:00. Open afternoon window: 12:00 – 15:00. Service duration: 75 minutes.

EXPECTED RESULT	ACTUAL RESULT (UNFIXED)
The API should calculate a single, clean sequence of slot choices starting at 12:00 PM (12:00 – 13:15, 13:15 – 14:30) and prune rigid morning opening grid intervals that start before or during leave.	**The endpoint merges two competing time grids into `timeSlotChoices`:** 1. Rigid morning grid (from 10:00): `12:30 - 13:45` (unavailable), `13:45 - 15:00` (unavailable). 2. Post-leave grid (from 12:00): `12:00 - 13:15` (available), `13:15 - 14:30` (available). *Result:* Slots overlap by 45 minutes, creating contradictory available/unavailable flags for the same timeframe.

Live API Response Payload:

```
"timeSlotChoices": [
  { "startTime": "10:00", "endTime": "11:15", "status": "booked", "isAvailable": false },
  { "startTime": "11:15", "endTime": "12:30", "status": "unavailable", "isAvailable": false },
  { "startTime": "12:00", "endTime": "13:15", "status": "available", "isAvailable": true },
  { "startTime": "12:30", "endTime": "13:45", "status": "unavailable", "isAvailable": false },
  { "startTime": "13:15", "endTime": "14:30", "status": "available", "isAvailable": true },
  { "startTime": "13:45", "endTime": "15:00", "status": "unavailable", "isAvailable": false }
]
```

2. API BUG 04: Staggered Interval Slicing Post-Break Creates Conflicting Slots

HIGH NOT FIXED (STILL OPEN)

`GET /api/availability?date=2026-11-19&storeId=1&serviceId=1&groomerId=2`

Tested Condition: Working hours 09:00 – 17:00 with scheduled lunch break 12:00 – 13:00. Service duration: 75 minutes.

EXPECTED RESULT	ACTUAL RESULT (UNFIXED)
Following the 12:00 – 13:00 break, afternoon slots should cleanly resume from 13:00 (13:00 – 14:15, 14:15 – 15:30), and orphan intervals from the morning schedule should be discarded.	**The endpoint retains an unpruned orphan slot from the morning schedule:** Rigid morning 75-minute intervals starting at 09:00 yield a 14:00 slot (09:00, 10:15, 11:30, 12:45, 14:00). Post-break slots start at 13:00 (13:00, 14:15). Both are returned in `timeSlotChoices`, producing 15-minute staggered collisions: `13:00` (avail), `14:00` (unavailable orphan), and `14:15` (avail).

Live API Response Payload:

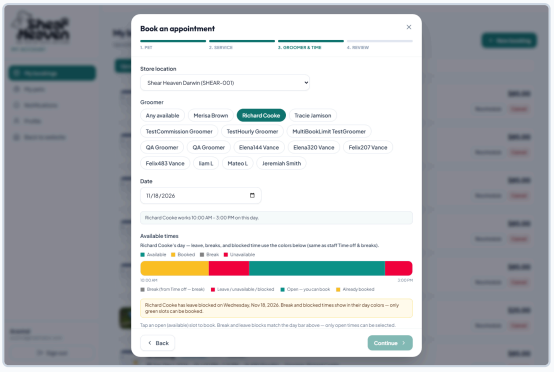

```
"timeSlotChoices": [
  { "startTime": "09:00", "endTime": "10:15", "status": "available", "isAvailable": true },
  { "startTime": "10:15", "endTime": "11:30", "status": "available", "isAvailable": true },
  { "startTime": "11:30", "endTime": "12:45", "status": "booked", "isAvailable": false },
  { "startTime": "12:45", "endTime": "14:00", "status": "booked", "isAvailable": false },
  { "startTime": "13:00", "endTime": "14:15", "status": "available", "isAvailable": true },
  { "startTime": "14:00", "endTime": "15:15", "status": "unavailable", "isAvailable": false },
  { "startTime": "14:15", "endTime": "15:30", "status": "available", "isAvailable": true }
]
```

3. UI BUG 01: Customer Wizard Overlapping, Interleaved Slot Buttons on Leave Date

HIGH NOT FIXED (STILL OPEN)

Module: Customer Portal → New Booking Wizard → Step 3 (Date & Time Selection) | **Tested Date:** 2026-11-18

EXPECTED RESULT	ACTUAL RESULT (UNFIXED)
The wizard should present a clean sequence of available slot choices for open afternoon hours: `12:00 PM – 1:15 PM` and `1:15 PM – 2:30 PM`. Outdated or phantom morning intervals should not be displayed as red buttons.	**The UI renders interleaved available and unavailable buttons side-by-side:** • `12:00 PM – 1:15 PM` (Available / White background) • `12:30 PM – 1:45 PM` (Disabled / Bright Red #f4013e) • `1:15 PM – 2:30 PM` (Available / White background) • `1:45 PM – 3:00 PM` (Disabled / Bright Red #f4013e) *Impact:* Customers see conflicting options starting 30 minutes apart with alarming red blocked buttons.

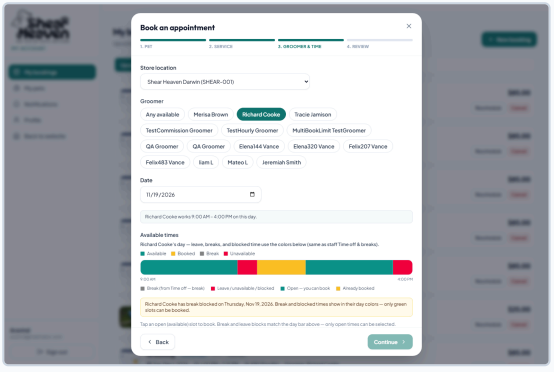

Live Verification Evidence: Customer Wizard Step 3 on 2026-11-18 displaying alternating red and available slot buttons.

4. UI BUG 02: Break Time Slicing Creates Confusing Staggered Slot Buttons

HIGH NOT FIXED (STILL OPEN)

Module: Customer Portal → New Booking Wizard → Step 3 (Date & Time Selection) | **Tested Date:** 2026-11-19

EXPECTED RESULT	ACTUAL RESULT (UNFIXED)
Slots should resume cleanly at 1:00 PM in 75-minute intervals without orphan 15-minute staggered buttons or misleading red disabled slots.	**The UI displays staggered 15-minute conflicting buttons:** • `1:00 PM – 2:15 PM` (Available / White background) • `2:00 PM – 3:15 PM` (Disabled / Bright Red orphan button) • `2:15 PM – 3:30 PM` (Available / White background) *Impact:* The orphan 2:00 PM red button creates a false impression that afternoon availability is fractured.

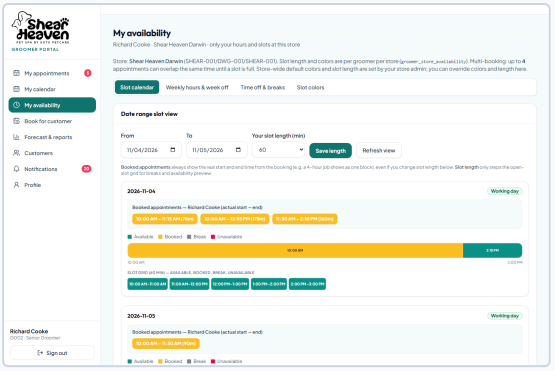

Live Verification Evidence: Customer Wizard Step 3 on 2026-11-19 displaying staggered 15-minute interval buttons.

5. UI BUG 04: Groomer Slot Calendar Grid Fails to Display Break Badges & Labels

MEDIUM NOT FIXED (STILL OPEN)

Module: Groomer Portal → My Availability → Slot Calendar Tab | **View:** Weekly Overview Grid

EXPECTED RESULT	ACTUAL RESULT (UNFIXED)
The calendar grid should display an informational chip or badge showing the break type and reason (e.g., "🍽️ Lunch Break 12:00 - 13:00").	**The calendar grid displays plain, blank blocks:** No chips, badges, tooltips, or descriptive text indicate why the time is blocked. Groomers cannot see whether a blocked block is a lunch break, approved personal leave, or salon closure without leaving the calendar and opening the list view.

Live Verification Evidence: Groomer Slot Calendar grid showing blank blocks without break badges or reason chips.

Recommended Engineering Remediation Roadmap

PRIORITY	COMPONENT	RECOMMENDED FIX	EST. EFFORT
P1 (Critical)	Backend: Availability Engine (`GET /api/availability`)	Refactor slot calculation to split the working day into discrete working periods around breaks and leaves (e.g., `[start, breakStart]` and `[breakEnd, end]`). Generate slots strictly within each period and prune any cross-boundary intervals. This resolves **API BUG 03, API BUG 04, UI BUG 01, and UI BUG 02** in a single fix.	1 – 2 Days
P2 (Medium)	Frontend: Customer Wizard (Step 3)	Add a defensive client-side filter to hide any unavailable slot choice that overlaps an available slot choice, preventing confusing red buttons from displaying if the backend returns dual grids.	0.5 Day
P3 (Medium)	Frontend: Groomer Slot Calendar Grid	Update the calendar cell renderer to check the groomer's break/time-off array and inject a styled informational badge (e.g. `<span class="badge-break">Lunch Break</span>`) with a tooltip. Resolves **UI BUG 04**.	0.5 Day
