Shear Heaven Pet Care - QA Test Report

Application	Shear Heaven Pet Spa - Pet Care Management (Admin, Groomer, Customer portals)
Environment	Front end https://pcmdev.shearheavenpetspa.com (dev) -> API https://api.shearheavenpetspa.com
Test dates	Round 1: 1 Nov 2026 (front-end build index-C6rzbR2S). Round 2 + regression: 11 Nov 2026 (new build index-C-Bk9gyt).
Tester	Claude (Cowork) for ARAVIND, Conceps
Accounts used	Platform admin (provided); QA groomer qa.alpha@shearheaven.local; QA store admin qa.storeadmin@shearheaven.local; QA groomer qa.beta@shearheaven.local; QA customer qa.cust1101@mailinator.com (see Test Data)
Approach	Browser UI testing in the in-app browser plus direct API testing (same origin, real tokens) with timing; DB validated through API read-back and aggregate reconciliation (no direct DB access).
Test data	All data created is prefixed 'QA' and isolated in store QAA-001 'QA Auto Store Edited' where possible - see 'Test Data & Cleanup'.
Not executed	Load and stress tests were deliberately held back: the dev UI talks to api.shearheavenpetspa.com, which may be production. Run them only after confirming a dedicated test backend.

Test execution

Status	Count	% of total
Pass	110	61.5%
Fail	68	38.0%
Blocked	0	0.0%
Not run	0	0.0%
Info	1	0.6%
Total	**179**	**100.0%**
Pass rate (excl. Not run/Info)		*61.8%*

Defects by severity

Severity	Count	Open
Critical	1	1
High	7	7
Medium	23	23
Low	19	19
Total	**50**	**50**

Coverage by requested test type

Test type	Status	Notes
End-to-End (E2E)	**Done**	Admin builds store -> hours -> services/package -> groomer -> availability -> visible to groomer and customer -> customer signup/OTP -> pet -> booking with coupon -> groomer accept -> check-in -> tip -> completed -> receipt -> dashboard.
Functional	**Done**	All Admin screens in scope; Groomer portal pages; Customer flows.
API	**Done**	35+ endpoints: status codes, messages, response times, data read-back.
UI	**Done**	Forms, required fields, dropdowns, toasts, navigation, mobile 375 px, accessibility scan.
Integration / Cross-role	**Done**	Admin data verified in Groomer and Customer portals and public APIs; bookings verified across roles.
Database validation	**Partial**	Via API read-back and dashboard-vs-bookings reconciliation; no direct DB access was provided.
Positive / Negative / Boundary	**Done**	Per field: min/max, empty, type, format, duplicates, injection.
Security	**Done**	AuthN/AuthZ, IDOR, mass assignment, brute force, SQLi, XSS, error leakage, headers, docs exposure, tenant isolation.
Performance (baseline)	**Done**	Latency sampling per endpoint, light 10-way concurrency.
Load	**Deferred**	Waiting for confirmation that the API/DB is not production.
Stress	**Deferred**	Same as Load.
Regression	**Done**	13 earlier bugs re-tested on the 11-Nov build (index-C-Bk9gyt): all still reproduce; BUG-022 partially fixed. Re-run this workbook after fixes.

Top risks / recommendations

1. Fix the groomer schedule IDOR (BUG-001) immediately: derive groomerId only from the JWT and add an authorization test for every groomer endpoint.

2. Fix the booking workflow defects before release: customer reschedule always fails (BUG-034), cancellation requests release the slot and allow overbooking (BUG-035), and any groomer can approve another groomer's bookings (BUG-036).

3. Make service creation reject duplicate codes (BUG-002) and wrap multi-row writes (packages, groomers) in transactions with FK checks (BUG-005, BUG-006).

4. Add login throttling/lockout (BUG-003) and fix the signup OTP limiter to count only OTP sends per email/phone (BUG-014).

5. Replace raw SQL errors with a global error handler returning 400/404 and log details server-side (BUG-004).

6. Add server-side range validation for all time/date/weight ranges (BUG-009 to BUG-013).

7. Confirm whether api.shearheavenpetspa.com is production; if yes, point the dev build at a dev API (BUG-019) before load/stress testing.

8. Unify password policy across roles and add security headers; restrict /api-docs outside development.
