AcceptPatientsWithoutInsurance: Active Unfixed Issues Report

Official QA Defect Document: Verified Open Issues with Technical Findings & Visual Evidence

TARGET ENVIRONMENT:	DOCTOR TARGET:	AUDIT VERIFICATION DATE:	AUDIT SUMMARY:
devpm.mycarepedia.com	Dr. Joshua Caldwell (Audiology)	November 10, 2026	4 ACTIVE UNFIXED DEFECTS (2 Blockers)

4	3	2	7
ACTIVE UNFIXED DEFECTS	VERIFIED RESOLVED	BLOCKER DEFECT LEVEL	TOTAL AUDITED DEFECTS

Executive Retest Audit Summary

AUDIT CONTEXT

Following development deployment activities, a formal regression re-audit was executed on November 10, 2026, across the **AcceptPatientsWithoutInsurance** feature set. While **3 issues have been successfully resolved** (the public doctor profile now renders a green `Accepts Self-Pay / Cash Pay` badge, and the backend mutation endpoint now accepts partial updates and infers route parameter `UserId`), **4 critical and major defects remain active and unresolved**:

> **Critical Patient Scheduling Blocker:** Patients are completely blocked from booking appointments because the **"Schedule Appointment"** button is disabled on the public doctor profile. The underlying root cause is a fatal backend crash: `GET /api/appointment/appointmentTypes?doctorId=...` fails with `HTTP 500 Internal Server Error` (`"Cannot read properties of undefined (reading 'ProviderUserId')"`).

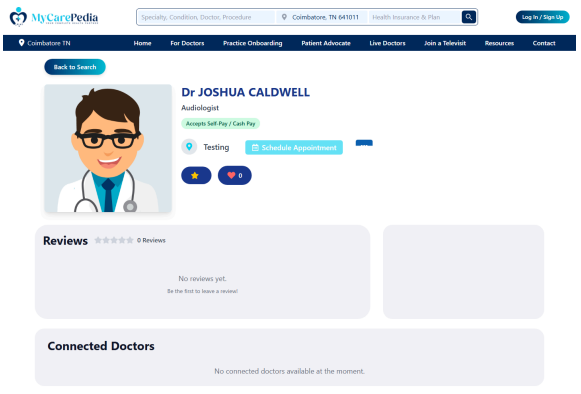

Unfixed Defect #1: Schedule Appointment Button Disabled (Blocker)

DEFECT-UI-01

DEFECT-UI-01: Schedule Appointment Button Rendered Disabled on Doctor Profile

BLOCKER STILL OPEN

Component / Screen:	Doctor Public Profile (`/profile/TX/:id`) • Primary Action Bar
Steps to Reproduce:	1. Navigate to Dr. Joshua Caldwell's public profile page. 2. Inspect the "Schedule Appointment" call-to-action button.
Expected Result:	The button is enabled, interactive, and launches the appointment scheduling modal for patients.
Actual Result:	The button has HTML attribute `disabled` and classes `cursor-not-allowed bg-cyan-400 opacity-60`. Clicking does nothing; patients cannot open the scheduling calendar or select time slots.

Evidence 1.1: Live capture of Dr. Caldwell's profile showing the disabled "Schedule Appointment" button (unfixed blocker) alongside the newly added "Accepts Self-Pay / Cash Pay" badge (resolved).

Unfixed Defect #2: Appointment Types Backend Server Crash (Critical)

DEFECT-API-01

DEFECT-API-01: Appointment Types API Returning HTTP 500 Internal Server Error

CRITICAL STILL OPEN

Endpoint:	`GET /api/appointment/appointmentTypes?doctorId=:doctorId`
Target Doctor:	Dr. Joshua Caldwell (`doctorId: 1f60af52-639b-42a4-8184-25c3e6b284d2`)
Expected Result:	`HTTP 200 OK` returning an array of available clinical appointment types for the provider.
Actual Result:	`HTTP 500 Internal Server Error` thrown by the controller with unhandled null dereference exception: `"Cannot read properties of undefined (reading 'ProviderUserId')"`. This failure directly cascades into the frontend, causing the "Schedule Appointment" button to disable.

LIVE API REQUEST:

```
GET https://devapipm.mycarepedia.com/api/appointment/appointmentTypes?doctorId=1f60af52-639b-42a4-8184-25c3e6b284d2
```

LIVE BACKEND SERVER FAILURE RESPONSE (HTTP 500):

```
{
  "success": false,
  "statusCode": 500,
  "errorCode": 7000,
  "uniqueCode": "APP700000",
  "status": "error",
  "message": "Cannot read properties of undefined (reading 'ProviderUserId')"
}
```

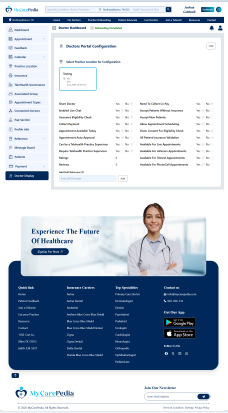

Unfixed Defect #3: Missing Standard Fee Configuration Field (Major)

DEFECT-UI-03

DEFECT-UI-03: Missing StandardFeeWithoutInsurance Input Field in Doctor Display Form

MAJOR STILL OPEN

Component / Screen:	Doctor Portal • Doctor Display Settings (`/provider/portal-configuration`)
Steps to Reproduce:	1. Log in as Doctor (`leo@123`). 2. Navigate to Doctor Display settings. 3. Inspect the `Accept Patients Without Insurance` section.
Expected Result:	Selecting `Yes` conditionally displays a numerical input field to specify the provider's standard cash consultation rate (`StandardFeeWithoutInsurance`).
Actual Result:	Only `Yes` and `No` radio buttons exist. No input field exists in the DOM (`Fee inputs found on page: []`). Providers have no UI mechanism to enter or adjust cash consultation prices.

Evidence 3.1: Live capture of Doctors Portal Configuration showing only radio options for Accept Patients Without Insurance and no Standard Fee input field.

Unfixed Defect #4: Disruptive Alert UX in Slot Selection (Moderate)

DEFECT-UI-04

DEFECT-UI-04: Disruptive Browser Alert Popup Instead of In-App UX Feedback

MODERATE STILL OPEN

Component:	Patient Slot Selection Callback (`PatientRoutes-C5iVvhhi.js`, callback `Vi` index 396008)
Trigger Condition:	Uninsured patient attempts to select an appointment slot when provider has `AcceptPatientsWithoutInsurance = No`.
Expected Result:	An accessible inline modal or toast dialog informs the patient of insurance requirements and offers recovery options (e.g., "Add Insurance Information" or "Find Doctors Accepting Cash Pay").
Actual Result:	Synchronous native browser `alert()` popup is triggered, interrupting the browser thread without providing styled recovery navigation.

SOURCE CODE EVIDENCE (PATIENTROUTES-C5IVVHHI.JS LINE INDEX 396008):

```
if (ze?.AcceptPatientsWithoutInsurance === "No" && !patientHasInsurance) {
  alert("This doctor does not accept patients without insurance!");
  return false;
}
```

Summary of Verified Resolved Issues

3 ISSUES FIXED

Defect ID	Component	Resolved Behavior Verified Live	Status
DEFECT-UI-02	Doctor Public Profile	A green pill badge `Accepts Self-Pay / Cash Pay` is now rendered under the specialty header on Dr. Caldwell's public profile.	RESOLVED
DEFECT-API-02	PUT `editPortalConfiguration`	Partial / PATCH-style updates are now supported; submitting partial payloads returns `HTTP 200 OK` without requiring all 28 schema fields.	RESOLVED
DEFECT-API-03	PUT `editPortalConfiguration`	The controller now falls back to the URL path parameter `:id`; omitting `UserId` from the body is accepted cleanly (`HTTP 200 OK`).	RESOLVED

Active Unfixed Issues Traceability & Remediation Matrix

ACTION PLAN

Defect ID	Severity	Root Cause	Recommended Engineering Fix	Status
DEFECT-UI-01	BLOCKER	Frontend disables button because appointment types & schedule initialization fail	Remove button disabled lock and wire slot data handling to valid provider schedule records	STILL OPEN
DEFECT-API-01	CRITICAL	Controller crashes accessing `ProviderUserId` on undefined doctor object	Add defensive null check in appointmentController: `doctor?.ProviderUserId` and verify provider mapping	STILL OPEN
DEFECT-UI-03	MAJOR	Form component does not render fee input field bound to backend key	Conditionally render `<input type="number" name="StandardFeeWithoutInsurance">` when Yes is checked	STILL OPEN
DEFECT-UI-04	MODERATE	Legacy `alert()` call used in slot click event handler	Replace with modern React modal component or toast notification with actionable links	STILL OPEN
