Issues and Bugs Evidence Report – Pet Care Management System

Audit Date: November 4, 2026
Auditor: Quality Assurance & Advanced Agentic Engineering Team
Environment: Staging / Pre-Production Gateway (`https://api.shearheavenpetspa.com`)
Scope: Consolidated Dossier of All Confirmed System Defects & Discrepancies

Executive Defect Summary Index

Bug ID	Severity	Module / Affected Route	Defect Title & Primary Symptom	Status
BUG-01	**HIGH**	API Gateway (`POST /api/bookings`)	Standalone Subtask Booking Authorization & Validation Loophole	**CONFIRMED**
BUG-02	**HIGH**	Groomer Portal (`/groomer/insights`)	Completed Service Revenue Not Credited to Assigned Groomer (Bug 07)	**CONFIRMED**
BUG-03	**MEDIUM**	API Gateway (`POST /api/coupons/validate`)	Missing Dedicated Coupon Validation Route (Returns HTTP 404)	**CONFIRMED**
BUG-04	**MEDIUM**	API Gateway (`GET /api/pets`)	Pet Entity DTO Inconsistency (`petName` vs. Standard `name`)	**CONFIRMED**
BUG-05	**MEDIUM**	API Gateway (`GET /api/bookings/history`)	Missing Booking History Route (Returns HTTP 404)	**CONFIRMED**
BUG-06	**LOW**	Groomer Portal (Milestone Modal)	Dual Subtask Line Representation in Milestone Modal	**CONFIRMED**
BUG-07	**LOW**	Groomer Portal (Upcoming Tab)	Premature Check-in Lockout on Future-Dated Appointments	**CONFIRMED**
BUG-08	**LOW**	Authentication (`POST /api/auth/login`)	Documented Lead Groomer Password Desynchronization	**CONFIRMED**

BUG-01: Standalone Subtask Direct Booking API Loophole (API-DEF-01)

- **Module:** API Gateway & Customer Booking Service → `POST /api/bookings`
- **Severity:** 🔴 **HIGH (Business Logic & Authorization Vulnerability)**
- **Status: CONFIRMED & REPRODUCED**

Defect Description

Subtasks configured with `isSubTask: true` and `bookableStandalone: false` (such as `SUB-SAN-01` Sanitary Hygiene Trim, Service ID: `329`) can be booked directly through the backend REST API without choosing a parent package or service, completely bypassing business constraints.

Comparison Matrix

Evaluation Field	Specification / Expected Result	Observed / Actual Result
Server Validation	Backend must validate the service entity; if `bookableStandalone === false`, direct booking must be rejected.	Backend performs no standalone check on `serviceId: 329`.
HTTP Status Code	`HTTP 400 Bad Request` or `HTTP 422 Unprocessable Entity`	`HTTP 201 Created`
Error Message	*"This service is a subtask and cannot be booked standalone without a parent package."*	*"Booking created successfully"*
Booking Creation	No booking record should be inserted into database.	Standalone **Booking** `#146` created with `packageId: null`, $25.00 total.

Technical Payload Evidence

```
json
// POST https://api.shearheavenpetspa.com/api/bookings
// Request:
{
  "storeId": "SHEAR-001",
  "regionId": "DWG-001",
  "clientId": "SHEAR-001",
  "petId": 5,
  "serviceId": 329,
  "groomerId": 2,
  "bookingDate": "2026-12-16",
  "startTime": "10:00",
  "endTime": "10:20"
}

// Response (HTTP 201 Created):
{
  "success": true,
  "message": "Booking created successfully",
  "data": {
    "bookingId": 146,
    "status": "pending",
    "serviceStage": "pending",
    "totalDurationMinutes": 20,
    "totalPrice": 25,
    "serviceCharge": 25,
    "salesTax": 2.03,
    "finalTotal": 27.03,
    "packageId": null,
    "serviceName": "Sanitary Hygiene Trim"
  }
}
```

Visual Evidence

- Customer Portal displaying standalone Booking `#146`:
- Store Admin Bookings Grid showing standalone Booking `#146`:

BUG-02: Completed Service Revenue Not Credited to Assigned Groomer (Bug 07)

- **Module:** Groomer Portal → Forecast & Reports → By Groomer (`/groomer/insights`)
- **Severity:** 🔴 **HIGH (Payroll & Financial Reporting Integrity)**
- **Status: CONFIRMED & REPRODUCED**

Defect Description

When an assigned groomer completes 100% of the physical service milestones for an appointment and moves the visit to "Ready for checkout", the Groomer Financial Report ("By groomer" table) completely fails to credit the completed service count or service revenue to that groomer.

Comparison Matrix

Reporting Field	Specification / Expected Result	Observed / Actual Result
Completed Count	Increments by 1 upon 100% milestone completion (`serviceStage === 'ready_for_checkout'`).	Displays **0** completed services.
Service Sales ($)	Credits earned service amount (e.g. $85.00 / $90.00) to assigned groomer.	Displays **$0.00** service sales.
Total Collected	Reflects revenue attributed to the groomer's completed labor.	Displays **$0.00** total collected.
Attribution Trigger	Labor delivery completion by stylist.	Exclusively gated behind smartphone digital tip submission.

Technical Payload Evidence

```
json
// GET /api/common/groomer/forecast?startDate=2026-11-03&endDate=2026-11-03
{
  "groomerId": 1,
  "groomerName": "Merisa Brown",
  "totalAppointments": 3,
  "completedCount": 0,    // ❌ Fails to credit completed service
  "completedSales": 0,    // ❌ Fails to credit service revenue
  "grossCollected": 0
}
```

BUG-03: Missing Dedicated Coupon Validation Route (API-DEF-03)

- **Module:** API Gateway → Coupon Service → `POST /api/coupons/validate`
- **Severity:** 🟡 **MEDIUM (API Specification Defect)**
- **Status: CONFIRMED**

Comparison Matrix

Evaluation Field	Specification / Expected Result	Observed / Actual Result
Route Availability	`POST /api/coupons/validate` exposed on gateway.	Route not registered on API gateway.
HTTP Status Code	`HTTP 200 OK` (with discount and net total) or `HTTP 400` (invalid).	`HTTP 404 Not Found`
Response Payload	Structured JSON with `discountAmount`, `isValid`, `finalTotal`.	`{"success": false, "message": "Route POST /api/coupons/validate not found"}`

Technical Payload Evidence

```
http
POST /api/coupons/validate HTTP/1.1
Host: api.shearheavenpetspa.com
Content-Type: application/json

{ "couponCode": "SVC10P", "storeId": "SHEAR-001" }

HTTP/1.1 404 Not Found
Content-Type: application/json; charset=utf-8

{
  "success": false,
  "message": "Route POST /api/coupons/validate not found",
  "error": {
    "code": "NOT_FOUND",
    "message": "Route POST /api/coupons/validate not found"
  }
}
```

BUG-04: Pet Entity DTO Schema Inconsistency in Pet APIs (API-DEF-04)

- **Module:** API Gateway & Customer Pet Service → `GET /api/pets`
- **Severity:** 🟡 **MEDIUM (API Schema / DTO Contract Inconsistency)**
- **Status: CONFIRMED**

Comparison Matrix

Schema Attribute	Specification / Expected Result	Observed / Actual Result
Pet Name Key	Standard `name` property present across all pet CRUD responses.	Property is `petName`; canonical `name` is `undefined`.
Frontend Compatibility	Code reading `pet.name` renders animal name.	Code reading `pet.name` displays blank/undefined text.

Technical Payload Evidence

```
json
// GET /api/pets
{
  "success": true,
  "message": "Pets retrieved successfully",
  "data": [
    {
      "id": 4,
      "petName": "KIKI",
      "name": undefined,     // ❌ Missing canonical name property
      "breed": "Poodle",
      "profilePicture": "/uploads/pets/pet-1792580266201-91183953.png"
    }
  ]
}
```

BUG-05: Missing Consolidated Booking History Route (API-DEF-05)

- **Module:** API Gateway & Booking Service → `GET /api/bookings/history`
- **Severity:** 🟡 **MEDIUM (API Contract Defect)**
- **Status: CONFIRMED**

Comparison Matrix

Evaluation Field	Specification / Expected Result	Observed / Actual Result
History Route	`GET /api/bookings/history` returns past completed/cancelled visits.	Route not registered on API gateway.
HTTP Status Code	`HTTP 200 OK`	`HTTP 404 Not Found`

Technical Payload Evidence

```
http
GET /api/bookings/history HTTP/1.1
Host: api.shearheavenpetspa.com
Authorization: Bearer <customer_token>

HTTP/1.1 404 Not Found
Content-Type: application/json; charset=utf-8

{
  "success": false,
  "message": "Route GET /api/bookings/history not found",
  "error": {
    "code": "NOT_FOUND",
    "message": "Route GET /api/bookings/history not found"
  }
}
```

BUG-06: Dual Subtask Line Representation in Milestone Modal (UI-SUB-01)

- **Module:** Groomer Portal → Milestone Modal
- **Severity:** 🔵 **LOW (Usability & Workflow Redundancy)**
- **Status: CONFIRMED**

Defect Description

When a customer books a package that bundles a subtask (e.g. Royal VIP Spa Package 4144 containing Sanitary Hygiene Trim), the milestone modal generates duplicate operational lines for the exact same physical subtask.

Comparison Matrix

Modal Component	Specification / Expected Result	Observed / Actual Result
Subtask Line Count	Bundled subtask renders once under parent package.	Renders twice: under service group and package group.
Groomer Assignment	Single groomer assignment dropdown per subtask.	Two separate dropdowns requiring duplicate selection.
Progress Execution	Clicking `Done` completes the subtask.	Stylist must click `Done` twice for the same physical trim.

Visual Evidence

- Milestone Modal showing duplicate lines:
- Dual Groomer Assignment Dropdowns:

BUG-07: Premature Check-in Lockout on Future Appointments (UI-SUB-02)

- **Module:** Groomer Portal → Upcoming Appointments Tab
- **Severity:** 🔵 **LOW (Operational Flow)**
- **Status: CONFIRMED**

Defect Description

Confirmed appointments scheduled for future calendar dates enforce an inflexible check-in lock (`Check-in locked` badge), preventing stylists from preparing milestones or handling early drop-offs.

Comparison Matrix

Appointment State	Specification / Expected Result	Observed / Actual Result
Future Appointment Card	Allows viewing milestone outline or early check-in.	Displays `Check-in locked`; `Update milestone` hidden.
Operational Flexibility	Early drop-off handled smoothly.	Hard lockout until calendar day of service arrives.

Visual Evidence

- Upcoming View with Check-in Locked Badges:

BUG-08: Documented Lead Groomer Password Desynchronization (SEC-AUTH-01)

- **Module:** Authentication Gateway → `POST /api/auth/login`
- **Severity:** 🔵 **LOW (Operational Credential Drift)**
- **Status: CONFIRMED**

Comparison Matrix

Login Attempt	Specification / Expected Result	Observed / Actual Result
Password `Groomer@Pass2026`	Successfully authenticates Lead Groomer `g001@shearheaven.com`.	Fails with `HTTP 401 Unauthorized` ("*Invalid email or password*").
Password `Sasi@123`	Should be deprecated/inactive.	Successfully authenticates (`HTTP 200 OK`).

Technical Payload Evidence

```
http
POST /api/auth/login HTTP/1.1
Host: api.shearheavenpetspa.com
Content-Type: application/json

{ "email": "g001@shearheaven.com", "password": "Groomer@Pass2026" }

HTTP/1.1 401 Unauthorized
{ "success": false, "message": "Invalid email or password" }
```

```
http
POST /api/auth/login HTTP/1.1
Host: api.shearheavenpetspa.com
Content-Type: application/json

{ "email": "g001@shearheaven.com", "password": "Sasi@123" }

HTTP/1.1 200 OK
{ "success": true, "token": "ey...", "user": { "id": 1, "name": "Merisa Brown", "role":
"groomer" } }
```

Engineering Remediation Recommendations

1. **BUG-01 (P1):** Enforce server-side validation in `POST /api/bookings`:

   ```
   javascript
   if (service.isSubTask && !body.packageId && !service.bookableStandalone) {
     return res.status(422).json({
       success: false,
       message: "This service is a subtask and cannot be booked standalone without a
   parent package."
     });
   }
   ```

2. **BUG-02 (P1):** Modify Groomer Insights aggregator to base completed service metrics on `serviceStage === 'ready_for_checkout' || 'completed'`. Introduce an in-salon "Pay at Desk / Finalize Visit" closure in the Groomer Portal.
3. **BUG-03 (P2):** Implement and register `router.post('/api/coupons/validate', couponController.validateCoupon)`.
4. **BUG-04 (P2):** Standardize pet serialization to output both `name` and `petName`.
5. **BUG-05 (P2):** Register `router.get('/api/bookings/history', bookingController.getBookingHistory)`.
6. **BUG-06 (P3):** De-duplicate milestone line items by unique `subTaskId` within parent packages.
7. **BUG-07 (P3):** Add an "Early Arrival / Check-in Now" override button for future-dated appointments.
8. **BUG-08 (P3):** Rehash and update `g001@shearheaven.com` credentials to `Groomer@Pass2026`.
