MyCarePedia - API Issues QA Audit Report

Doctor Display Configuration & Gateway Endpoints | Date: Nov 5, 2026

AUDIT SUMMARY & TARGET INFORMATION

Doctor: Dr. Joshua Caldwell (Audiologist) | Provider ID: 1f60af52-639b-42a4-8184-25c3e6b284d2

API Hosts: https://devapipm.mycarepedia.com | https://uatcache.mycarepedia.com

Scope: Backend mutations, schema persistence, cache endpoints, search indexing, and HTTP errors.

API-BUG-01: Response Schema Omission: ShareDoctor Missing in doctorDashboardConfig API

HIGH FAIL

Endpoint: GET https://devapipm.mycarepedia.com/api/docters/doctorDashboardConfig/:id/

Description: The mutation PUT /api/docters/editPortalConfiguration/:id accepts {"ShareDoctor":"Yes"} and returns 200 OK. However, the subsequent GET /doctorDashboardConfig/:id/ query drops the ShareDoctor field entirely from its response payload. This causes a frontend schema desync where the UI defaults the missing key to "No".

Expected Result: The response JSON should include `"ShareDoctor": "Yes"` matching the saved value in the database.

Actual Result: The response JSON completely omits the `"ShareDoctor"` key.

```
// PUT Sent: { "ShareDoctor": "Yes", "EnabledLiveChat": "Yes", ... } -> 200 OK
// GET Received:
{
  "status": true,
  "data": {
    "EnabledLiveChat": "Yes",
    "AppointmentAvailableToday": "Yes",
    // CRITICAL: ShareDoctor field is completely missing!
    "AppointmentAutoApproval": "Yes"
  }
}
```

Evidence: Schema desync causing Doctor Display UI reversion to "No"

API-BUG-02: HTTP 500 Server Crash on Invalid Email Format in Share Doctor API

HIGH FAIL

Endpoint: POST https://devapipm.mycarepedia.com/api/doctor/share-doctor (or email dispatch)

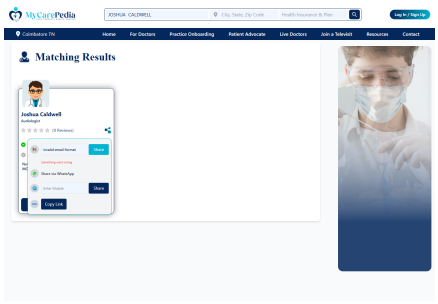

Description: Submitting a malformed email string ("invalid-email-format") triggers an unhandled backend exception resulting in HTTP 500 Internal Server Error (Error code: 9000). The backend service lacks input validation middleware to catch invalid email formats.

Expected Result: API should return HTTP 400 Bad Request with a clear validation error message: `{"status": false, "message": "Invalid email address format"}`.

Actual Result: Server crashes with HTTP 500 Internal Server Error: `{"status": false, "message": "Something went wrong", "code": 9000}`.

```
// Network Request:
POST /api/doctor/share-doctor
Payload: { "email": "invalid-email-format" }

// Server Response:
HTTP/1.1 500 Internal Server Error
{ "status": false, "message": "Something went wrong", "code": 9000 }
```

Evidence: Browser console and UI showing HTTP 500 failure on invalid email

API-BUG-03: Search Cache Endpoints Return 0 Results Due to Double Whitespace in Stored Record

HIGH FAIL

Endpoint: GET https://uatcache.mycarepedia.com/api-cache/autocomplete-provider/v1?query=Joshua%20Caldwell

Description: When querying for "Joshua Caldwell" (single space), both autocomplete-provider and freetext-specialty cache endpoints return 0 results. The underlying database stores the provider as "FirstName": "JOSHUA", "LastName": " CALDWELL" (with a leading space) and "Display_Name": "JOSHUA CALDWELL". The cache search does not normalize whitespace.

Expected Result: Cache search should tokenize and match "Joshua Caldwell" regardless of extra spaces in the database record.

Actual Result: Returns `{"FT_SearchCount":0,"autoSugCount":0,"results":[]}`.

```
// Query: GET /api-cache/autocomplete-provider/v1?query=Joshua%20Caldwell
Response: {"FT_SearchCount":0,"autoSugCount":0,"results":[],"timing":{"suggestionMs":0,"searchMs":"75.55"}}

// Database Record:
{ "FirstName": "JOSHUA", "LastName": " CALDWELL", "Display_Name": "JOSHUA   CALDWELL" }
```

Evidence: Cache returning 0 results due to non-normalized whitespace

API-BUG-04: Valid NPI Returned in failedNpiIds Array by /doctor/doctorsearch/v3 API

MEDIUM FAIL

Endpoint: POST https://devapipm.mycarepedia.com/doctor/doctorsearch/v3

Description: When calling /doctorsearch/v3 with Dr. Caldwell's valid NPI ("1861060253"), the response returns the doctor object, but ALSO includes "1861060253" inside the "failedNpiIds" array. This happens because the doctor's "Taxo_NPI_ID" is set to his UUID instead of the 10-digit NPI number.

Expected Result: Valid queried NPIs should not appear in "failedNpiIds".

Actual Result: Response contains `"failedNpiIds": ["1861060253"]` alongside the valid doctor object in `"doctors": [...]`.

```
// Request:
POST /doctor/doctorsearch/v3
{ "npiIds": ["1861060253"], "page": 1, "pageSize": 10 }

// Response:
{
  "status": true,
  "failedNpiIds": ["1861060253"],
  "doctors": [{ "Taxo_NPI_ID": "1f60af52-639b-42a4-8184-25c3e6b284d2", "FirstName": "JOSHUA" ... }]
}
```

Evidence: Doctor card returned despite NPI flagged in failedNpiIds

API-BUG-05: Live Doctors Endpoint Fails to Filter Onboarded Provider with AvailableForLive = Yes

MEDIUM FAIL

Endpoint: GET https://devapipm.mycarepedia.com/api/doctors/live

Description: The query endpoint powering the Live Doctors screen does not return Dr. Joshua Caldwell even though his portal configuration has AvailableForLive: "Yes", AppointmentAvailableToday: "Yes", and EnabledLiveChat: "Yes".

Expected Result: Live doctors query should retrieve active onboarded providers who have AvailableForLive set to "Yes".

Actual Result: Query returns an empty list, displaying "No Live Doctors Available".

```
// Route: https://devpm.mycarepedia.com/live-doctors
// Database Configuration:
{ "AvailableForLive": "Yes", "AppointmentAvailableToday": "Yes", "EnabledLiveChat": "Yes" }
// Result: 0 doctors returned by endpoint
```

Evidence: /live-doctors rendering empty state due to endpoint query mismatch
