MyCarePedia - UI Issues QA Audit Report

Doctor Display, Share Doctor & Live Chat Verification | Date: Nov 5, 2026

AUDIT SUMMARY & TARGET INFORMATION

Doctor: Dr. Joshua Caldwell (Audiologist) | User ID: 1f60af52-639b-42a4-8184-25c3e6b284d2

Environment: https://devpm.mycarepedia.com | Tested Module: Doctor Display (/provider/portal-configuration)

Scope: Positive & Negative UI scenarios for Share Doctor, Live Chat, Badges, and Search Visibility.

UI-BUG-01: Doctor Display Radio Button Desync: Share Doctor Reverts to "No" on Reload

HIGH FAIL

Screen / Route: /provider/portal-configuration (Doctor Display)

Description: When the doctor configures "Share Doctor" to "Yes" and saves, the success modal is shown. However, upon page reload, the UI radio button defaults back to "No". This is caused by the backend configuration API omitting the key, which causes the React component to fall back to the initial "No" state.

Expected Result: The "Share Doctor" radio button should persist as "Yes" across page reloads and portal navigation.

Actual Result: The radio button resets to "No" upon reload, misrepresenting the active provider setting.

Evidence: Reloaded Doctor Display screen showing Share Doctor radio reverted to "No"

UI-BUG-02: Share Doctor Email Input Missing Client-Side Format Validation

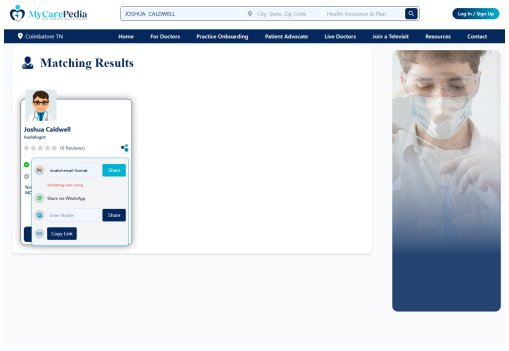

MEDIUM FAIL

Screen / Route: Doctor Search Results & Profile -> Share Doctor Drawer

Description: Entering an invalid email string (e.g. "invalid-email-format") into the Share Doctor email field and clicking Share executes a network request without client-side regex check. The server returns HTTP 500 and the UI displays an unhelpful generic error text: "Something went wrong".

Expected Result: Client-side regex validation should immediately highlight the input in red and show "Please enter a valid email address" without dispatching an API call.

Actual Result: No client validation triggers; unhandled HTTP 500 error occurs and generic red text "Something went wrong" is rendered.

Evidence: Share Doctor popup showing server crash error "Something went wrong" on invalid email

Doctor Display, Share Doctor & Live Chat Verification

UI-BUG-03: Validation Error Text Causes Abrupt Layout Shifting in Share Doctor Popup

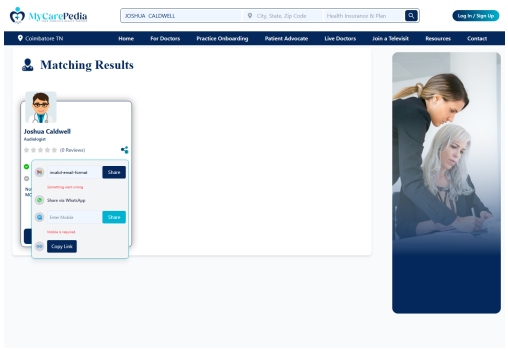

LOW FAIL

Screen / Route: Share Doctor Popup (Mobile Number Field)

Description: When clicking "Share" on an empty mobile number field, the validation text "Mobile is required." dynamically expands the modal vertically, shifting the "Copy Link" button downward unexpectedly and disrupting visual alignment.

Expected Result: Validation error text should have dedicated reserved space or be styled inline to prevent sudden layout shifts of adjacent action buttons.

Actual Result: Popup expands dynamically and shifts downstream elements, degrading user interaction.

Evidence: Share Doctor modal showing "Mobile is required." error shifting action buttons

UI-BUG-04: Live Doctors Catalog Screen Shows "No Live Doctors Available" Empty State

MEDIUM FAIL

Screen / Route: https://devpm.mycarepedia.com/live-doctors

Description: Even though Dr. Joshua Caldwell has "Available For Live Appointments" = Yes, "Appointment Available Today" = Yes, and "Enabled Live Chat" = Yes, the public /live-doctors page displays an empty banner: "No Live Doctors Available".

Expected Result: Dr. Joshua Caldwell profile card should be displayed under Live Doctors with active consultation buttons.

Actual Result: Page displays static "No Live Doctors Available" empty state banner with 0 doctor cards rendered.

Evidence: /live-doctors page rendering "No Live Doctors Available"

Doctor Display, Share Doctor & Live Chat Verification

UI-BUG-05: Televisit Catalog Page Omits Doctor Card Despite Televisit Being Enabled

MEDIUM FAIL

Screen / Route: https://devpm.mycarepedia.com/televist

Description: Even though "Available For Televist Appointments" = Yes was saved, navigating to the Televisit page renders 0 doctor cards for Dr. Caldwell.

Expected Result: Dr. Caldwell should be visible on the Televisit listing.

Actual Result: Zero doctor cards are rendered for Dr. Caldwell on the Televisit page.

Evidence: /televist page showing doctor card missing

UI-BUG-06: Full Name Query Closes Autocomplete Without Suggestions

MEDIUM FAIL

Screen / Route: Homepage Search Header (/)

Description: Typing the complete name "Joshua Caldwell" into the Doctor/Specialty search input returns 0 autocomplete suggestions and the search results page renders 0 matching results.

Expected Result: Typing "Joshua Caldwell" should suggest Dr. Joshua Caldwell in the dropdown.

Actual Result: Zero suggestions appear because the doctor name in the database contains two spaces ("JOSHUA CALDWELL").

Evidence: Autocomplete only suggests doctor when typing single-token query "Caldwell"
