Expected Result
The Customer Name field should enforce an appropriate maximum character limit and accept valid name input according to the field requirements.
The Phone Number field should validate the permitted phone-number format and length, and reject invalid or incomplete numbers before booking submission.
The Pet Name field should enforce an appropriate maximum character limit and prevent input beyond the configured limit.
The Breed field should enforce an appropriate maximum character limit and prevent excessively long input.
The Last Vaccination Date field should prevent users from selecting a future date. Only valid dates on or before the current date should be accepted.
For the current booking date, time slots earlier than the current time should be disabled or rejected. Only available future slots should be selectable.

Actual Result
The Customer Name field accepts input beyond the expected character limit; no maximum-length validation is applied.
The field accepts an invalid/incomplete phone number (e.g., 999999) without showing a validation message.
The Pet Name field accepts input beyond the expected character limit without validation.
The Breed field accepts input beyond the expected character limit without displaying a validation message.
A future date (e.g., December 2, 2026) can be selected even though the current date is November 13, 2026.
Past time slots remain selectable for the selected booking date (e.g., 9:00 AM), allowing a booking to be scheduled in the past.
