

practice location	if given the suggest location on location field, additionally if add any text it will allow to submit and while edit the details, the error is indicated like City, State, Zip is required. EHR -> connect lab -> add new lab	Expected Result: The Location field should validate the selected location and manually entered text consistently. If City, State, and Zip are required, the validation should be applied during the initial submission itself. The same valid location details should not show a required-field error while editing. Actual Result: The form allows submission after adding additional text to a suggested location. During edit, it displays "City, State, Zip is required" validation errors.
practice location	The SFTP Host / IP Address field is accepted wrong format like any single digit number or word without .com. (eg., 5) EHR -> connect lab -> add new lab	Expected Result: The field should accept only a valid IP address or a valid hostname/domain format and should display a validation error for invalid inputs. Actual Result: The field accepts invalid values such as a single digit or word without .com or a valid IP address format.
practice location	Email field is not accepted above 10 characters before @gmail.com. EHR -> connect lab -> add new lab	Example: abcdefghijkl@gmail.com — not accepted because the part before @gmail.com exceeds 10 characters. Expected Result: The Email field should allow valid email addresses with more than 10 characters before @gmail.com, as long as the overall email format is valid. Actual Result: The Email field restricts the username/local-part to a maximum of 10 characters before @gmail.com.
practice location	Address line field is not accepted above 20 characters. EHR -> connect lab -> add new lab	Expected Result: The Address Line field should allow a sufficient number of characters to enter a complete address without unnecessary restriction. Actual Result: The Address Line field stops accepting input after 20 characters.
practice location	Effective Date is later than the End Date, allowing an invalid date range. The End Date should be later than the Effective Date. EHR Setup -> Procedure Code Setup -> add procedure code	Expected Result: The End Date should be later than the Effective Date. The system should display a validation message and prevent submission when the End Date is earlier than or equal to the Effective Date. Actual Result: The system allows an End Date that is earlier than the Effective Date without displaying a validation error.
practice location	EHR Setup -> Pharmacy Setup -> add new pharmacy ----> Pharmacy Name is accepted without word (eg,...@!@##\$^^%&^**^*****&(&(&)	Expected Result: The Pharmacy Name field should require at least one alphabetic character and should reject input containing only special characters. A proper validation message should be displayed. Actual Result: The Pharmacy Name field accepts special-character-only input and allows the user to proceed.

practice location	EHR Setup -> Pharmacy Setup -> add new pharmacy ----> while add a pharmacy, if given the suggest location on location field, additionally if add any text it will allow to submit.	Expected Result: Once a suggested location is selected, the Location field should validate the entered value properly.
