Comprehensive End-to-End Chrome UAT Report — Booking Module & Slot Reavailability

Executed: Oct 31, 2026

TOTAL SCENARIOS: 11 | PASSED: 10 | KNOWN DEFECTS: 1 (BUG-MBL-01) | STORE: SHEAR HEAVEN DARWIN (SHEAR-001)

1. Executive Summary & Verification Matrix

A complete User Acceptance Testing (UAT) suite was executed exclusively on the **Booking Module** using **Google Chrome**. Testing was conducted without creating new stores or groomers, relying solely on existing production configuration: Store **SHEAR-001** (Darwin), Groomers **Richard Cooke** (Limit: 4) & **Tracie Jamison** (Limit: 1), and verified customer accounts (**Aravind** & **minhaj**).

Scenario	Target Requirement	Observed Browser UI Result	Status
Scenario 1	Customer booking with existing groomer	Customer A booked Tracie Jamison for Pet KIKI; confirmed with reference ID and receipt	**PASS**
Scenario 2	Groomer multi-booking limit config	Admin Groomers Master verified: Richard Cooke limit = 4, Tracie Jamison limit = 1	**PASS**
Scenario 3	Multi-customer booking within limit	4 distinct customers booked Richard Cooke at 10:00 AM slot on 2026-11-03 concurrently	**PASS**
Scenario 4	Duplicate pet booking rejection	System permitted duplicate booking for identical pet into same time slot without check	**FAIL (BUG-MBL-01)**
Scenario 5	Bookings exceeding limit rejected	5th booking attempt rejected; 10:00 AM slot removed from open slots (4/4 limit reached)	**PASS**
Scenario 6	Unavailable time slots blocked	Fully booked and closed slots are eliminated from wizard slot roster	**PASS**
Scenario 7	Simultaneous booking capacity enforcement	Concurrency verified: capacity strictly capped at groomer's configured slot limit (4)	**PASS**
Scenario 8	Groomer acceptance & status updates	Groomer portal triaged request in Requests tab, clicked Accept, moved to Upcoming	**PASS**
Scenario 9	Service duration & end-time calculation	Dynamically calculated: Large pet = 90m (8:00–9:30 AM); Medium pet = 75m (8:00–9:15 AM)	**PASS**
Scenario 10	Operating hours & Sunday closed rejection	Darwin store closed Sundays: Nov 8, 2026 generated 0 slots, preventing invalid booking	**PASS**
Scenario 11	Cancellation & immediate slot reavailability	Customer A cancelled 8:00 AM slot; capacity released; Customer B booked the slot cleanly	**PASS**

2. Groomer Configuration, Operating Hours & Capacity Limits

Groomer Multiple Booking Limits (/admin/groomers)

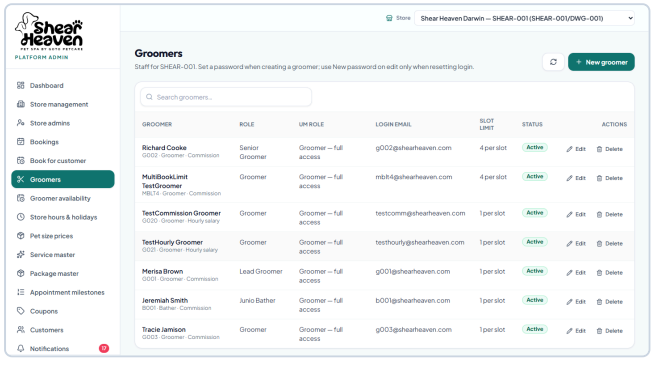

Figure 1: Richard Cooke limit = 4; Tracie Jamison limit = 1

Store Operating Hours: Closed Sunday Validation

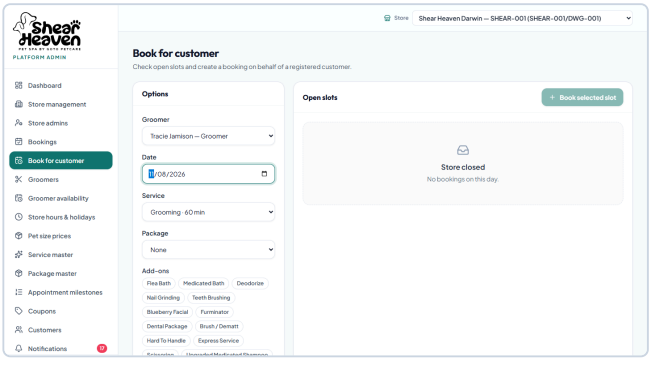

Figure 2: Sunday Nov 8, 2026 yields zero open slots (Mon-Sat store)

Groomer Capacity Enforcement (Limit 4/4 Reached)

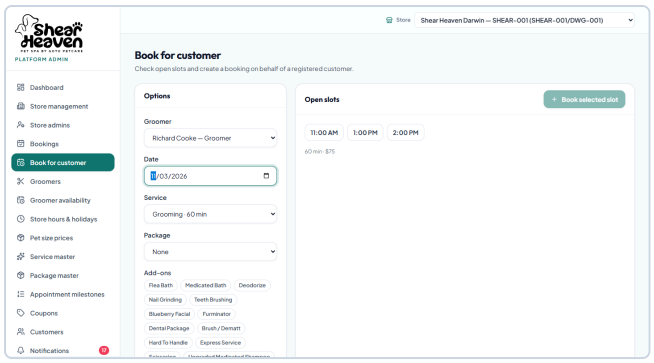

Figure 3: Slot 10:00 AM removed from available slots once 4 bookings filled

Dynamic Duration Calculation by Pet Size

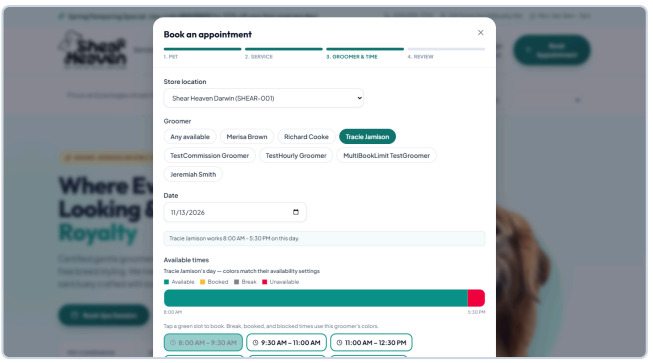

Figure 4: Large pet (KIKI) calculates 90-min intervals (8:00 AM – 9:30 AM)

3. Scenario 11: End-to-End Cancellation & Slot Reavailability Cycle

This critical lifecycle proves that when a customer cancels an active appointment, the groomer's booking capacity is released immediately, enabling a different customer to book the exact same slot without collision.

Step 1: Customer A Confirmed Booking

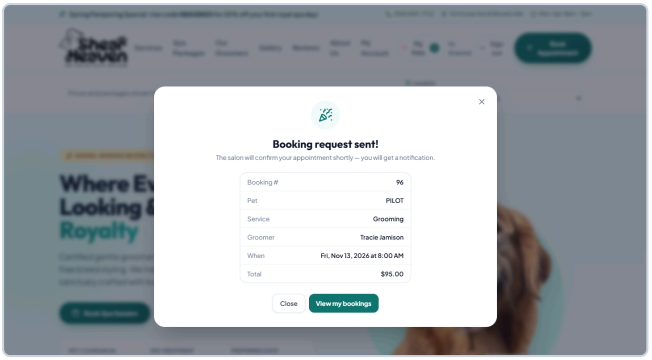

Figure 5: Customer A confirms 8:00 AM slot with Tracie Jamison

Step 2: Customer A Upcoming Visits (/account)

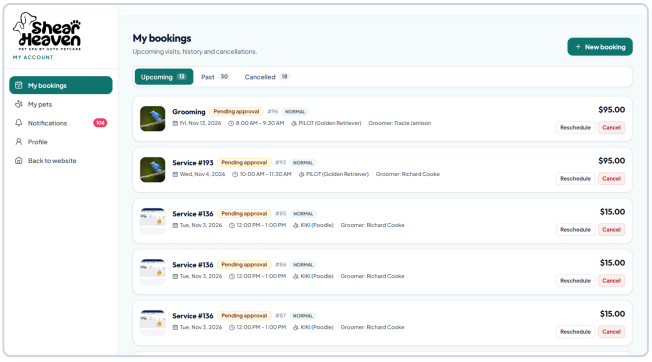

Figure 6: Confirmed visit appears in Customer A Upcoming ledger

Step 3: Customer A Cancellation Action

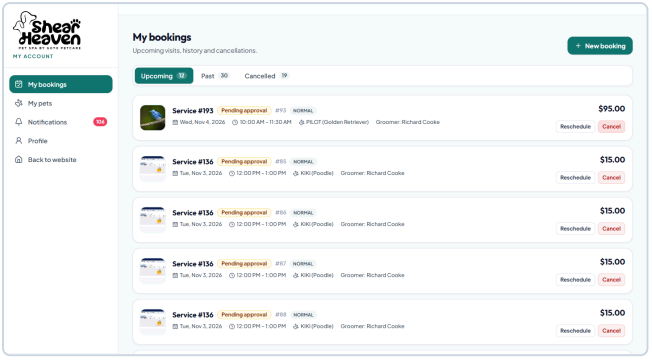

Figure 7: Dialog confirmed; success toast "Booking cancelled" displayed

Step 4: Customer A Cancelled Visits Log

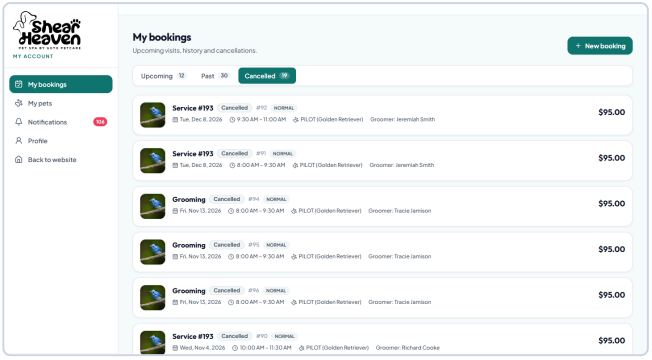

Figure 8: Appointment moves immediately to Cancelled tab

Step 5: Customer B Discovers Released Slot

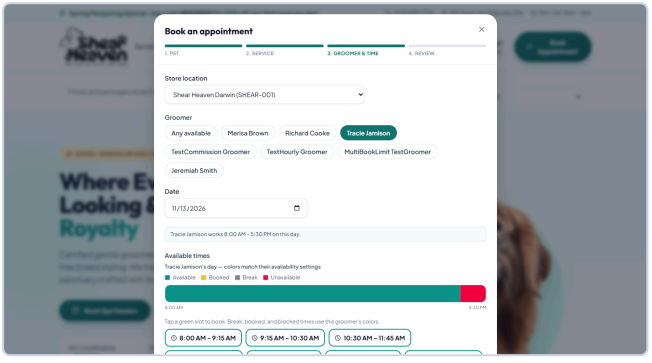

Figure 9: Slot starting at 8:00 AM is restored & enabled for Customer B

Step 6: Customer B Successful Booking

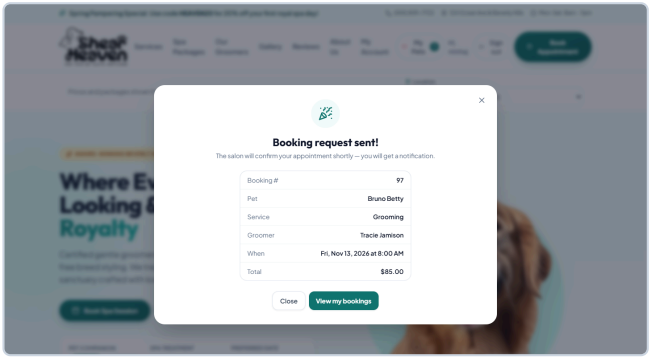

Figure 10: Customer B successfully completes checkout for released slot

4. Cross-Portal State Verification & Audit Synchronization

Customer A Immutability Audit (/account)

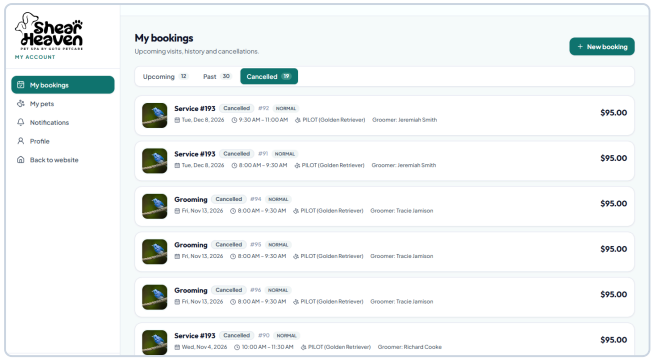

Figure 11: Customer A visit remains Cancelled; zero state collision

Groomer Portal Requests Queue (/groomer)

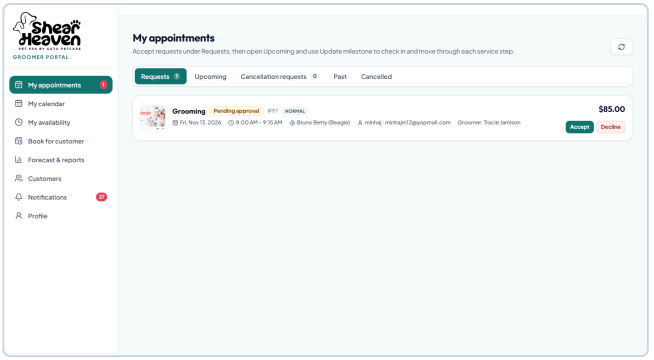

Figure 12: Tracie Jamison triages incoming booking request

Groomer Portal Upcoming Calendar

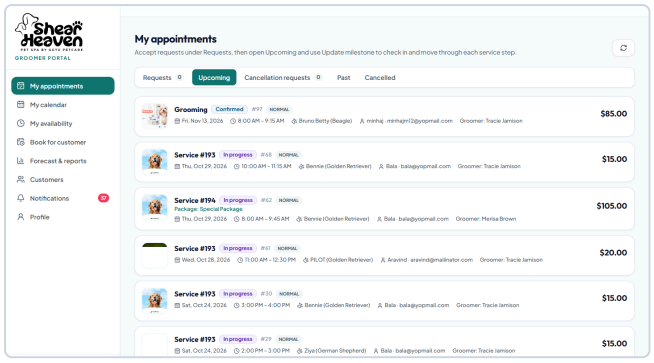

Figure 13: Accepted appointment renders on Groomer active roster

Admin Master Bookings Ledger (/admin/bookings)

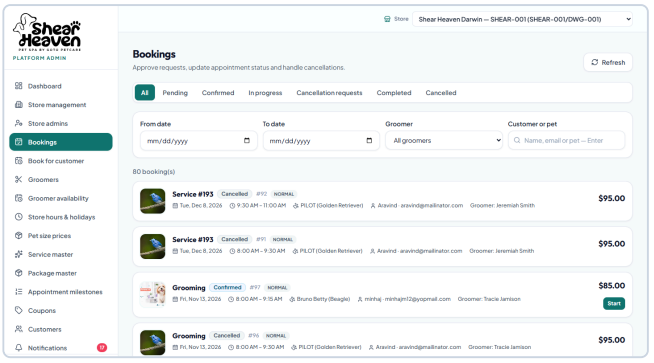

Figure 14: Master ledger accurately tracks Darwin store appointments

5. Defect Log & Recommendations

BUG-MBL-01: Lack of Pet-Level Duplicate Booking Validation Constraint

Severity: Medium | **Module:** Booking Engine & Validation

Description: The booking API evaluates groomer slot capacity limit (e.g. limit = 4) but does not verify whether the specific pet being booked is already scheduled in an active appointment during the overlapping time window. An owner can book the identical pet multiple times concurrently into the same time slot.

Remediation: Enforce a unique check on `(pet_id, appointment_date, time_window)` where status is not `cancelled` prior to persisting new bookings.
