Bug ID	Module	Bug Title	Steps to Reproduce	Expected Result
BUG-CPN-001	Coupon / Customer Checkout	Final payable amount should reflect the applied discount	1. Add an eligible service or package to checkout. 2. Apply a valid coupon. 3. Review the discounted total and proceed to payment. 4. Compare the final payable amount with the amount shown/charged.	After applying a coupon, the customer must pay the final discounted amount, including applicable tax. The checkout summary and payment amount must match.
BUG-CPN-002	Coupon Management / Admin UI	Coupon code field allows more than 6 characters	1. Log in to the Admin Portal. 2. Navigate to Coupon/Promotions Management. 3. Open the Create Coupon form. 4. Enter more than 6 characters in the coupon code field.	The coupon code field must restrict input to a maximum of 6 characters. The user must not be able to type or paste a 7th character.
BUG-CPN-003	Coupon / Customer Checkout – Package Booking Flow	After cancelling an invalid service-specific coupon on a package, the system asks the customer to select Walk-in	1. Create a coupon configured for services only. 2. Start a customer booking/checkout and select a package. 3. Enter or apply the service-specific coupon code. 4. Observe the coupon validation error. 5. Cancel/remove the coupon after the error. 6. Observe the next screen or required action.	The service-specific coupon must be rejected for a package with a clear validation message. After the customer cancels/removes the coupon, the existing package booking/checkout flow should remain intact and allow the customer to continue without a coupon. The system should not force the customer to select Walk-in unless this is an explicitly intended requirement.
BUG-CPN-004	Booking / Package Selection	Error message appears when selecting the package's main service	1. Open the customer booking flow. 2. Select a package. 3. Select the main grooming service included in the package. 4. Observe the validation message displayed on the Groomer & Time step.	The package's main service should be handled according to the package configuration. If it is already included in the package and should not be selected separately, the UI must clearly explain that restriction without incorrectly blocking the valid package booking flow.
BUG-CPN-005	Coupon / Customer Checkout	Applied coupon is not refreshed after cancellation	1. Open the customer booking or checkout flow. 2. Apply a valid coupon to the booking. 3. Verify that the coupon and discount are displayed. 4. Cancel/remove the applied coupon. 5. Observe the coupon details and checkout total.	After the coupon is cancelled/removed, the coupon details and discount must be cleared immediately. The subtotal and final payable amount must be recalculated without the cancelled coupon.
BUG-CPN-006	Coupon / Package Booking Flow	Service-specific coupon is displayed for package booking and triggers an incorrect Walk-in service prompt	1. Create a coupon configured for services only (example: 10% on services). 2. Start a customer booking and select a package that has no separate service charge. 3. Navigate to the Review step. 4. Observe that the service-specific coupon is available in the coupon dropdown. 5. Enter the coupon code and click Apply. 6. Observe the validation message and the prompt displayed below the coupon section.	A service-specific coupon should not be offered as applicable to a package booking that has no service charge. The system should clearly indicate the coupon is ineligible without disrupting the package booking. It should not ask the customer to choose a Walk-in appointment type unless the booking is intentionally being changed to Walk-in.

Bug ID	Actual Result	Severity	Status
BUG-CPN-001	The reported issue is that the amount payable after discount needs verification. The exact subtotal, discount, tax, displayed payable amount, and charged amount were not provided; capture these values during retesting before confirming the precise mismatch.	**High**	Open – Retest required
BUG-CPN-002	The coupon code field accepts more than 6 characters. The UI does not enforce the required 6-character maximum.	**Medium**	Open
BUG-CPN-003	The system displays an error when the service-specific coupon is applied to a package. After the customer cancels/removes the coupon, the UI asks the customer to select Walk-in instead of continuing the existing package booking flow.	**High**	Open – Retest required
BUG-CPN-004	After selecting the package's main service, the system displays the error message: “Grooming already exists in package”. The booking screen also shows no open slots for the selected date.	**High**	Open – Retest required
BUG-CPN-005	After applying the coupon and then cancelling it, the coupon is not refreshed or removed. It continues to be displayed on the screen.	**High**	Open – Retest required
BUG-CPN-006	The service coupon is displayed during package booking. After Apply is clicked, the UI shows “This coupon is for services, and this appointment has no service charge”. The Review screen also displays “Choose Walk-in appointment type for this service”, which interrupts the package booking flow.	**High**	Open – Retest required
