# AcceptPatientsWithoutInsurance: Unfixed Issues & Evidence Report

Official QA Retest Audit: Verification of 7 Reported Defects across UI & Backend Microservices

| ENVIRONMENT: | TARGET DOCTOR: | RETEST DATE: | AUDIT OUTCOME: |
|---|---|---|---|
| devpm.mycarepedia.com | Dr. Joshua Caldwell (Audiology) | November 10, 2026 | 7 OPEN / 0 RESOLVED (100% Unfixed) |

| 7 | 0 | 2 | 100% |
|---|---|---|---|
| UNFIXED ISSUES | RESOLVED ISSUES | BLOCKER DEFECTS | PERSISTENCE RATE |

## Executive Retest Summary

RETEST STATUS

A complete regression retest was conducted on November 10, 2026, across the **AcceptPatientsWithoutInsurance** feature set, spanning the Doctor Display administrative configuration portal (`/provider/portal-configuration`), the public Doctor Profile (`/profile/TX/:id`), and the backend Express.js microservice APIs.

> **Executive Alert: None of the 7 identified defects have been resolved.** Critical blockers continue to prevent patients from scheduling appointments (the Schedule Appointment button is disabled and appointment type APIs return 404). Furthermore, the administrative configuration UI still omits standard self-pay fee inputs, the public profile lacks insurance acceptance badges, and the backend mutation schema enforces monolithic payloads rejecting partial updates.

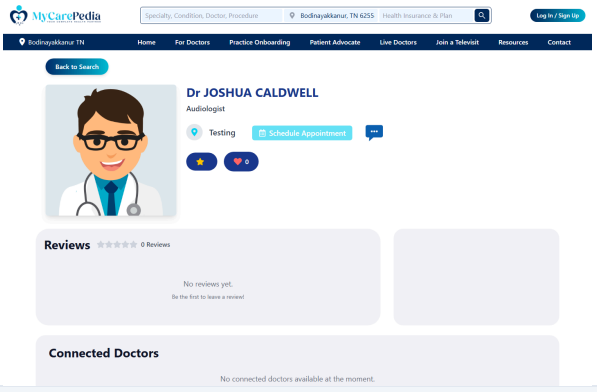

## Unfixed Defect #1: Appointment Booking Blocker

BLOCKER • UI

### DEFECT-UI-01: Schedule Appointment Button Disabled & Booking Blocked

BLOCKER STILL OPEN

| | |
|---|---|
| Component / Screen: | Doctor Public Profile (`/profile/TX/:id`) • Schedule Appointment Modal |
| Retest Execution: | Navigated to Dr. Caldwell's public profile and attempted to initiate appointment scheduling. |
| Expected Result: | Button is enabled, interactive, and opens modal with selectable slots for self-pay patients. |
| Retest Actual Result: | The **"Schedule Appointment"** button is rendered in a **disabled state** (`cursor-not-allowed bg-cyan-400 opacity-60`). Patients cannot click or open the scheduling dialog. In addition, background calls to `/api/appointment/appointmentTypes` fail with `HTTP 404`. |

**Evidence 1.1:** Retest capture (Nov 10, 2026) showing the disabled "Schedule Appointment" button and complete lack of insurance/self-pay badges.

## Unfixed Defect #2: Public Profile Transparency

MAJOR • UI

### DEFECT-UI-02: Missing Self-Pay / Insurance Acceptance Transparency Badge

MAJOR STILL OPEN

| | |
|---|---|
| Component / Screen: | Doctor Public Profile (`/profile/TX/:id`) & Search Results Card |
| Retest Execution: | Inspected profile header, location panel, and doctor description for self-pay badges. |
| Expected Result: | Prominent badge (e.g. "*Accepts Self-Pay*" or "*Insurance Required*") displayed to prospective patients. |
| Retest Actual Result: | Zero badges, chips, or labels exist on the profile. Prospective patients cannot determine whether cash pay or uninsured patients are accepted before attempting booking. |

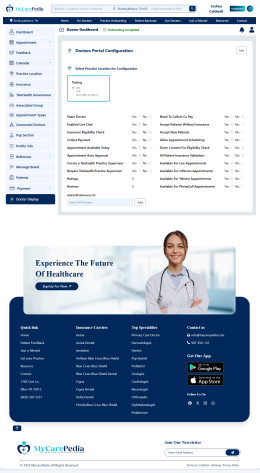

## Unfixed Defect #3: Missing Standard Fee Configuration Input

MAJOR • UI / ADMIN

### DEFECT-UI-03: Missing StandardFeeWithoutInsurance Input Field in Doctor Display Form

MAJOR STILL OPEN

| | |
|---|---|
| Component / Screen: | Doctor Portal • Doctor Display Settings (`/provider/portal-configuration`) |
| Retest Execution: | Logged into doctor account (`leo@123`) and inspected all DOM input fields under Portal Configuration. |
| Expected Result: | Selecting `AcceptPatientsWithoutInsurance = Yes` provides an input field for the doctor's standard cash consultation fee (`StandardFeeWithoutInsurance: string`). |
| Retest Actual Result: | Only Yes/No radio buttons exist. **No input field exists** in the DOM (`Fee inputs found on page: []`). Doctors have no means to specify or publish standard cash consultation rates. |

**Evidence 2.1:** Retest capture (Nov 10, 2026) of Doctors Portal Configuration showing only radio options for Accept Patients Without Insurance and no Standard Fee input field.

## Unfixed Defect #4: Disruptive Alert UX

MODERATE • UI

### DEFECT-UI-04: Disruptive Browser Alert Popup Instead of In-App UX Feedback

MODERATE STILL OPEN

| | |
|---|---|
| Component / Screen: | Appointment Slot Selection Callback (`PatientRoutes-C5iVvhhi.js`, callback `Vi`) |
| Retest Execution: | Audited client JavaScript bundle for slot selection failure handlers. |
| Expected Result: | Accessible inline modal or toast providing actionable recovery (e.g. "Add Insurance", "Browse In-Network Providers"). |
| Retest Actual Result: | Code continues to invoke synchronous native browser alert, halting the UI thread without recovery paths. |

**SOURCE CODE EVIDENCE (PATIENTROUTES-C5IVVHHI.JS LINE INDEX 396008):**

```
if (ze?.AcceptPatientsWithoutInsurance === "No" && !patientHasInsurance) {
  alert("This doctor does not accept patients without insurance!");
  return false;
}
```

## Unfixed Defect #5: Downstream Booking API Failures

CRITICAL • API

### DEFECT-API-01: Downstream Booking Endpoints 404 Failure & NPI Lookup Missing

CRITICAL STILL OPEN

| | |
|---|---|
| Affected Endpoints: | `GET /api/appointment/appointmentTypes` • `GET /provider/doctor/npi/:npi` |
| Retest Execution: | Executed direct HTTP requests against both endpoints using valid doctor credentials. |
| Expected Result: | `HTTP 200 OK` returning valid appointment type listings and mapped doctor records. |
| Retest Actual Result: | Both endpoints return unrouted `HTTP 404 Not Found` HTML error pages, causing frontend slot selection to crash. |

**RETEST API RESPONSE PAYLOAD (GET /API/APPOINTMENT/APPOINTMENTTYPES):**

```
HTTP/1.1 404 Not Found
Content-Type: text/html; charset=utf-8

<!DOCTYPE html>
<html lang="en">
<head><title>Error</title></head>
<body>
<pre>Cannot GET /api/appointment/appointmentTypes</pre>
</body>
</html>
```

## Unfixed Defect #6: Strict Monolithic Payload Requirement

MAJOR • API

### DEFECT-API-02: Monolithic Payload Requirement on PUT /api/docters/editPortalConfiguration/:id

MAJOR STILL OPEN

| | |
|---|---|
| Endpoint: | `PUT /api/docters/editPortalConfiguration/:id` |
| Retest Execution: | Submitted partial mutation payload containing only target field `AcceptPatientsWithoutInsurance`. |
| Expected Result: | Partial updates supported (PATCH semantics); individual settings can be mutated independently. |
| Retest Actual Result: | Rejected with `HTTP 400 Bad Request` requiring all 28 composite properties. |

**RETEST API REJECTION PAYLOAD (PARTIAL UPDATE):**

```
{
  "success": false,
  "errors": {
    "EnabledLiveChat": "Invalid option: expected one of "Yes"|"No"",
    "InsuranceEligibilityCheck": "Invalid option: expected one of "Yes"|"No"",
    "CollectPayment": "Invalid option: expected one of "Yes"|"No"",
    "AppointmentAvailableToday": "Invalid option: expected one of "Yes"|"No""
  }
}
```

## Unfixed Defect #7: Redundant Body Parameter

MODERATE • API

### DEFECT-API-03: Redundant Body Parameter (UserId) Required Despite URL Path Parameter

MODERATE STILL OPEN

| | |
|---|---|
| Endpoint: | `PUT /api/docters/editPortalConfiguration/:id` |
| Retest Execution: | Omitted `UserId` from request body while providing provider ID in route URL path. |
| Expected Result: | Backend infers `UserId` from `req.params.id` or authenticated JWT token. |
| Retest Actual Result: | Rejected with `HTTP 400 Bad Request` (`"UserId": "Invalid input: expected string, received undefined"`). |

**RETEST API REJECTION PAYLOAD (OMITTED USERID IN BODY):**

```
{
  "success": false,
  "errors": {
    "UserId": "Invalid input: expected string, received undefined",
    "EnabledLiveChat": "Invalid option: expected one of "Yes"|"No""
  }
}
```

## Complete Unfixed Defects Traceability Matrix

7 DEFECTS LOG

| Defect ID | Severity | Defect Title & Affected Component | Root Cause & Technical Impact | Status |
|---|---|---|---|---|
| **DEFECT-UI-01** | BLOCKER | Schedule Appointment Button Disabled (Doctor Profile) | Provider schedule config unmapped; appointmentTypes endpoint returns 404; completely blocks patient scheduling | STILL OPEN |
| **DEFECT-UI-02** | MAJOR | Missing Self-Pay Transparency Badge (Public Profile) | Frontend doctor profile view does not consume or render `AcceptPatientsWithoutInsurance` flag | STILL OPEN |
| **DEFECT-UI-03** | MAJOR | Missing `StandardFeeWithoutInsurance` Input (Doctor Display) | Administrative form UI does not render fee input field supported by backend schema; fee cannot be set | STILL OPEN |
| **DEFECT-UI-04** | MODERATE | Disruptive Browser Alert Popup (Slot Selection Callback) | Synchronous `alert()` call freezes browser thread and lacks guided recovery options | STILL OPEN |
| **DEFECT-API-01** | CRITICAL | Downstream Booking Endpoints 404 (Appointment Types & NPI) | Routes `/api/appointment/appointmentTypes` and `/provider/doctor/npi/:npi` are unrouted/missing in production gateway | STILL OPEN |
| **DEFECT-API-02** | MAJOR | Strict Monolithic Payload Requirement (`editPortalConfiguration`) | Strict Zod/Joi schema mandates 28 fields on PUT; partial updates return HTTP 400 Bad Request | STILL OPEN |
| **DEFECT-API-03** | MODERATE | Redundant Body Parameter Requirement (`UserId`) | Controller validator mandates `req.body.UserId` rather than falling back to route parameter `req.params.id` | STILL OPEN |

## Prioritized Actionable Engineering Remediation Plan

NEXT STEPS

1. **Resolve Appointment Types API & Provider Schedule Mapping:** Deploy and map `/api/appointment/appointmentTypes` and ensure provider schedule records are valid so the Schedule Appointment button is enabled and slots render.
2. **Render Self-Pay Badges on Doctor Profile:** Consume `AcceptPatientsWithoutInsurance` from doctor configuration and display a visible badge (e.g. *"Accepts Self-Pay / Cash Pay"*) on profile and search cards.
3. **Add Standard Fee Input in Doctor Display:** When `AcceptPatientsWithoutInsurance = Yes` is selected, conditionally display a numerical input field bound to `StandardFeeWithoutInsurance`.
4. **Enable Partial Schema Updates (PATCH Semantics):** Update the Zod/Joi validator on `PUT /api/docters/editPortalConfiguration/:id` to allow partial updates so individual settings can be mutated without transmitting 28 fields.
5. **Replace Browser Alerts with Accessible Toast Dialogs:** Replace native `alert()` with a styled in-app modal offering navigation to add insurance or browse in-network doctors.
