

Doctors	EHR --> doctor dashboard --> patient -->check eligibility --> error message is displayed	Actual : in provider dashboard view patient component in when i click check-eligibility that time showing error as WHERE parameter "AppointmentDetailsId" has invalid "undefined" value so i need to send a appointmentid in payload this api end point "/check-eligibility" Expected : appointmentid send to payload and get success response
practice location	Bug Title: Document Title and department field Accepts Special Characters Only Module: EHR → Practice Location → Appointment → EHR Form →clicialdata -> Documents → Add Test Data: `*^***%&^*&`	Expected Result: The Document name and department field should accept valid text containing letters and/or numbers and should not allow special characters-only input. Actual Result: The system accepts the special characters-only input in Document name and department fieldand allows the form to be submitted successfully. so set proper validation innthe feild and give correct chnages .the location of this page is src/component/ehr/form-section/document.tsx
practice location	Bug Title: Incorrect Document Type Retrieved in Edit Mode Module: EHR → Practice Location → Appointment → EHR Form →Clinical-data-> Documents →view -> Edit Mode	Expected Result: when update and add document ehr/document/update route need to store the type in db and show the updated data in ui Actual Result: The Type data is not stroing in db
practice location	Module: EHR → Practice Location → Appointment → EHR Form →clinical-data -> Health Watcher → Add Bug Title: Health Watcher Title Accepts Special Characters Only Test Data: `^*^(&(&(&&&)&`	Expected Result: The field comment and description should accept valid text containing letters and/or numbers and should not allow special characters-only input. Actual Result: The system accepts special characters-only input in the field and allows the form to be submitted. so make teh validation proper this feild .the path of this page is src/component/ehr/form-section/helathwatcher.tsx
practice location	Practice location --> EHR Setup --> EHR Config --> An option that has already been added should not be displayed again in the dropdown list.	Expected Result: Filter the dropdown based on the already exits no need to show already exists datas no need to shown in the dropdown Actual Result: Already exits list That is showing in the drowdown
practice location	Practice location --> EHR Setup --> EHR Config --> Document type --> selected document type --> Showing 2 times selected items	Expected Result: In document component when i add new document it showing twice selected list need to show one side Actual Result: Its showing twice selected

practice location	EHR --> doctor dashboard --> immunization form --> medication and procedure --> CVX Code and NDC Code --> When clicking the dropdown, no action occurs and the dropdown options are not displayed.	Expected Result: I get success respnose and data Actual Result: I got 500 error when hit these api end point ("/api/ehr/v1/getCvxList", "/api/ehr/v1/getNdcList")
practice location	EHR --> practice location ---> immunization form --> edit --> When editing the form, some of the previously entered fields are displayed as blank, including Time Given, Unit, First Name, Last Name, Address, City, State, ZIP, and Phone	Expected Result: That datas should be store in db and return with response Actual Result: When add thats data that not storing or not storing and not sending in response fix that issue api is ("/api/ehr/immunization/add")
