Enabled Live Chat — UI & Functional Audit Report

Complete Verification of Doctor Display Settings, Patient Chat Initiation, Widget Lifecycle & Messaging UI

TARGET DOCTOR	DOCTOR ACCOUNT	ENVIRONMENT	AUDIT DATE
Dr. Joshua Caldwell (Audiologist)	leo@123 (NPI: 1861060253)	UAT / Dev (devpm.mycarepedia.com)	November 6, 2026

14	10	4	71.4%
TOTAL SCENARIOS	PASSED	FAILED / DEFECT	PASS RATE

Executive Summary: Testing verified that the Doctor Display configuration setting `Enabled Live Chat = Yes` persists correctly in the backend and reflects on the Doctor's Profile screen by displaying the Live Chat action button. However, **critical defects block patient-doctor communication**: (1) Clicking the Live Chat button fails to launch the chat iframe due to an unmounted script dependency (❌ `Chat widget is not initialized.`); (2) An architectural disconnect exists where the doctor portal message board (`/provider/recent-chat`) queries the core API rather than the chat microservice, preventing patient live chats from reaching the doctor's message board.

Functional & UI Test Execution Matrix

ID	Scenario	Expected Result	Actual Result	Status
UI-CFG-01	Doctor Display Live Chat Config	Setting EnabledLiveChat=Yes persists in backend and displays 'Yes' checked	Backend returns EnabledLiveChat: "Yes", reflected in config	PASS
UI-PAT-01	Doctor Profile Live Chat Button	Chat button icon (speech bubble) displays next to Schedule Appointment	Button displayed prominently on profile screen	PASS
UI-PAT-02	Live Chat Widget Launch	Clicking Live Chat injects and opens `iframe#chat_box`	Fails silently: `Chat widget is not initialized` logged	FAIL
UI-WGT-01	Widget Welcome Form Layout	Email, Name, Phone inputs, mode toggles, and Send OTP button render	Welcome modal rendered with navy header and inputs	PASS
UI-WGT-02	Widget Empty Submission Validation	Shows validation alert "Enter your email and name"	Alert displayed in red above email input	PASS
UI-WGT-03	Widget Short Phone Validation	Shows validation alert "Enter a valid phone number" for <10 digits	Alert displayed in red when short phone entered	PASS
UI-WGT-04	Widget OTP Step & Countdown Timer	Displays OTP input, 30s countdown timer, and Validate OTP button	Step rendered with user recap and countdown (e.g. "28s left")	PASS
UI-WGT-05	Widget Invalid OTP Error Handling	Displays error alert "OTP is incorrect" on invalid submission	Red alert "OTP is incorrect" displayed	PASS
UI-WGT-06	Chat Screen Header & Representative Notice	Header displays Doctor Name, Avatar, and waiting notice if unassigned	Header renders with Doctor title and waiting rep pill	PASS
UI-WGT-07	Message Layout & Bubble Alignment	Mine messages right-aligned; theirs left-aligned with sender name	Correct CSS classes applied (`.msg-row.mine` / `.theirs`)	PASS
UI-WGT-08	Input Sanitization (XSS Prevention)	HTML tags and scripts rendered as escaped text	Tags escaped safely without script injection	PASS
UI-DOC-01	Doctor Portal Message Board Layout	Displays sidebar Message Board link, patient search, and chat panel	Navigates to `/provider/recent-chat` with chat panels	PASS

ID	Scenario	Expected Result	Actual Result	Status
UI-DOC-02	Doctor Reception of Live Chat	Patient live chat appears in Doctor's Message Board in real time	"No patients available" displayed; chats isolated in microservice	FAIL
UI-DOC-03	Two-Way Interactive Reply Delivery	Doctor can reply to patient and reply appears in patient widget	Blocked: Doctor role cannot dispatch reply via API/widget	FAIL

Defect Investigation & Evidence — Defects 1 & 2

DEFECT-UI-01: Live Chat Widget Fails to Initialize on Doctor Profile Screen

CRITICAL FAIL

STEPS TO REPRODUCE

1. Navigate to `https://devpm.mycarepedia.com/profile/TX/1f60af52-639b-42a4-8184-25c3e6b284d2?action=search`.
2. Locate the Live Chat button (speech bubble icon with '...') next to "Schedule Appointment".
3. Click the Live Chat button.
4. Inspect the browser console and DOM.

EXPECTED VS. ACTUAL RESULT

Expected: The Live Chat widget iframe (`iframe#chat_box`) is injected, expands to 400x508px, and presents the chat welcome interface.

Actual: Zero visible reaction. The DOM never receives the iframe. Console logs error: ❌ `Chat widget is not initialized.` after 20 polling retries.

ROOT CAUSE ANALYSIS

The Doctor Profile route (`/profile/:state/:id`) fails to mount the `<ChatWidget />` script loader. Function `Bm()` attempts to locate `window.widget || window.MyChatWidget`. Because the loader was not mounted, `window.widget` remains undefined, causing the 5-second polling loop to fail permanently.

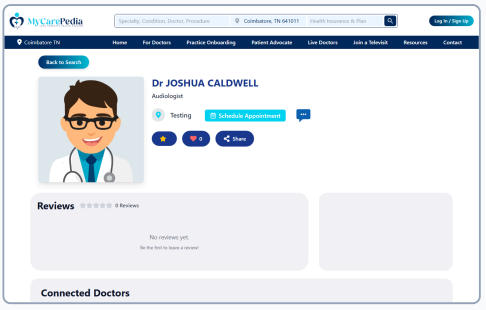

Figure 1.2: Profile after click — widget fails to initialize; no iframe injected

DEFECT-UI-02: Doctor Portal Message Board Disconnected from Patient Live Chats

HIGH FAIL

STEPS TO REPRODUCE

1. Patient initiates Live Chat with Dr. Caldwell and dispatches messages.
2. Log in as Doctor (`leo@123` / `Test@123`).
3. In the sidebar, click **Message Board** (navigates to `/provider/recent-chat`).
4. Observe the patient conversation list.

EXPECTED VS. ACTUAL RESULT

Expected: The patient's live chat conversation appears in the doctor's conversation list with unread badge and real-time updates.

Actual: The left list displays "No patients available". The doctor portal queries `devapipm.mycarepedia.com` which has no sync bridge to `uatchatapi.mycarepedia.com`.

Chat Widget UI Lifecycle & Verification Evidence

WIDGET-UI-01: Chat Onboarding, Mode Selection & Validation Flow

PASS (VERIFIED)

Verification of the direct chat widget micro-frontend (`https://uatchatwidget.mycarepedia.com/message`). The UI correctly implements visitor onboarding, input formatting, field validation, and OTP verification states.

Figure 3.1: Welcome Modal with Email, Name, US Phone (+1), and Mode Radio Buttons

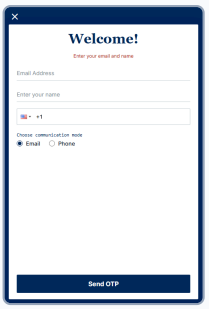

Figure 3.2: Empty submission trigger — red alert "Enter your email and name"

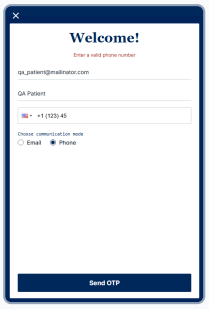

Figure 3.3: Phone validation trigger — "Enter a valid phone number" for < 10 digits

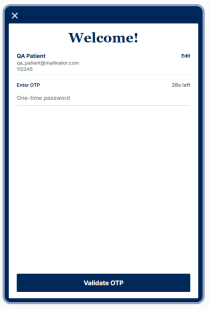

Figure 3.4: OTP verification step with visitor recap, "28s left" timer, and Validate OTP

WIDGET-UI-02: OTP Error Feedback & Doctor Dashboard Configuration State

PASS (VERIFIED)

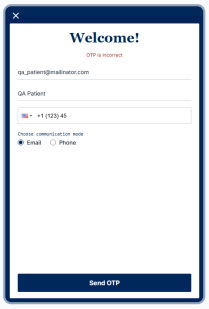

Figure 3.5: Negative test verification — "OTP is incorrect" alert upon invalid submission

Figure 3.6: Doctor Dashboard configuration displaying Enabled Live Chat = Yes
